Schumacher-Knepper store guide

This guide explains how to manage the Schumacher-Knepper Shopify store. Shopify button names are kept in English so they match the screenshots.

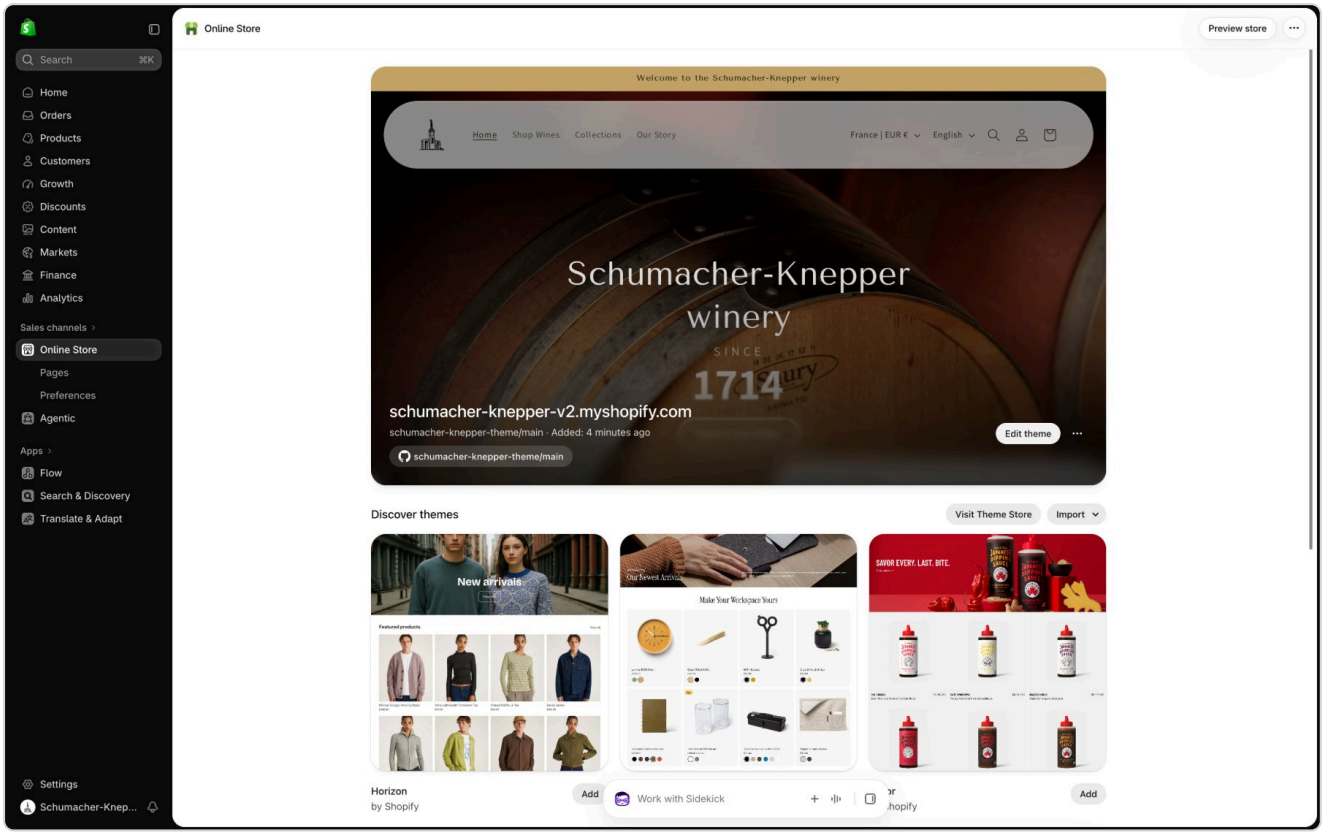

CONTENTS

1. Customizing the theme
2. Filters, collections and products
3. Translations

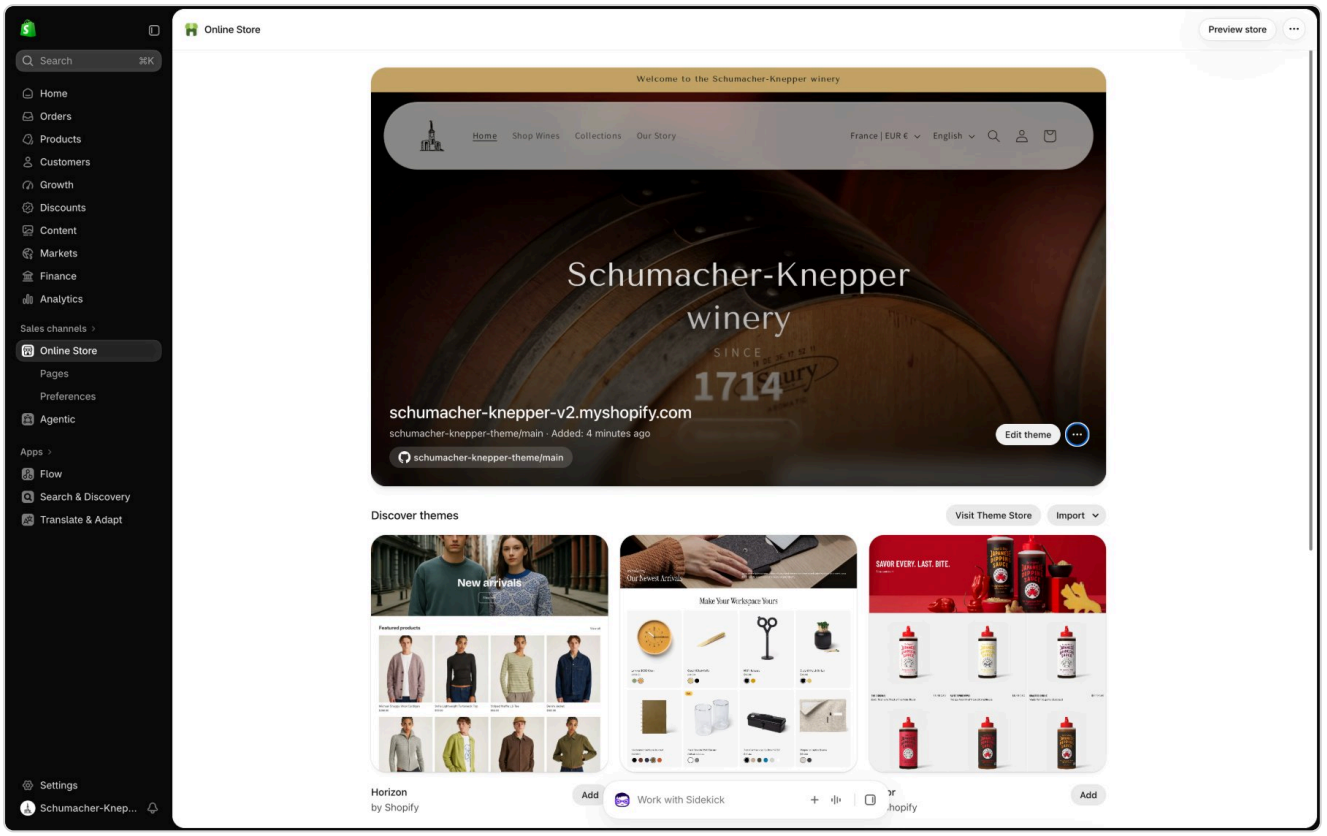

1. Customizing the theme

Make a safe copy of the theme

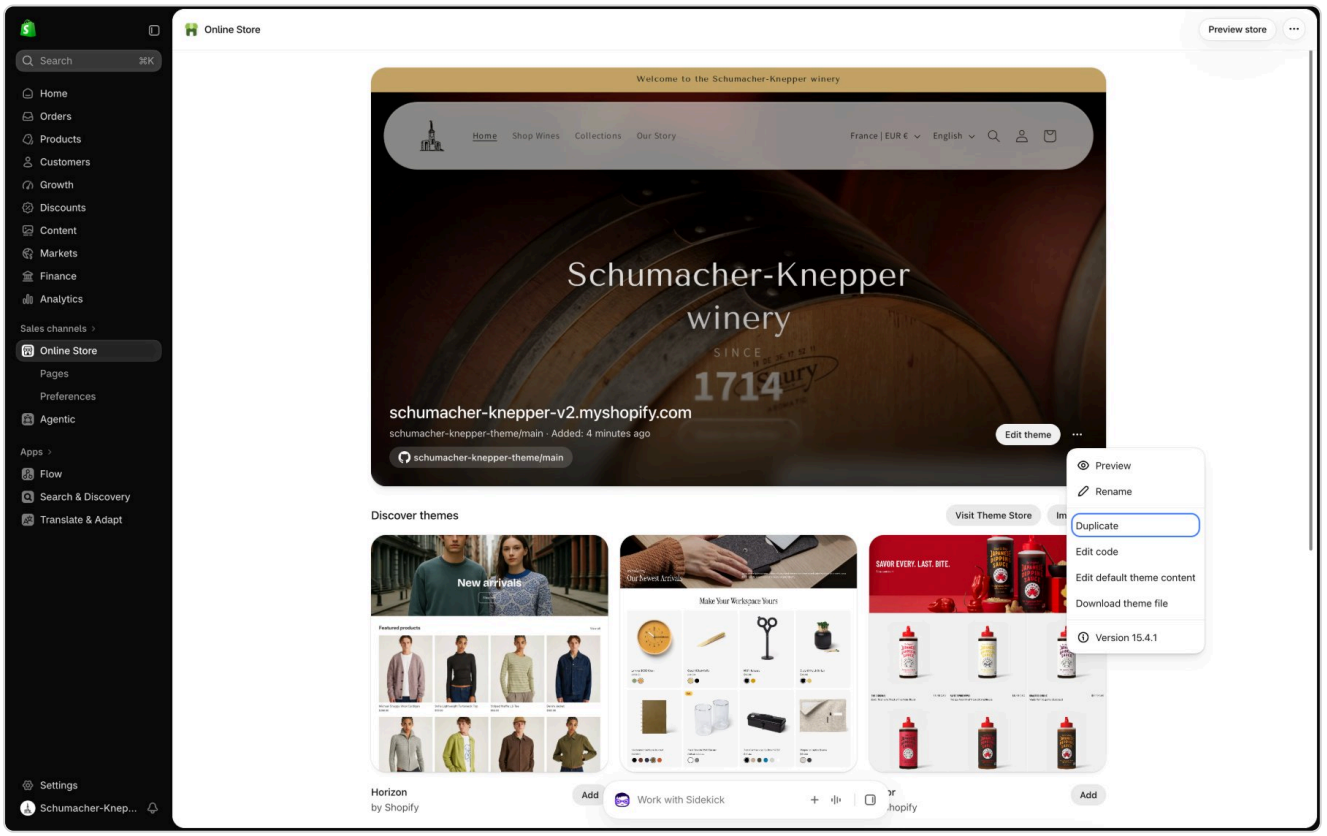

STEP 1 Click on **Online Store**.

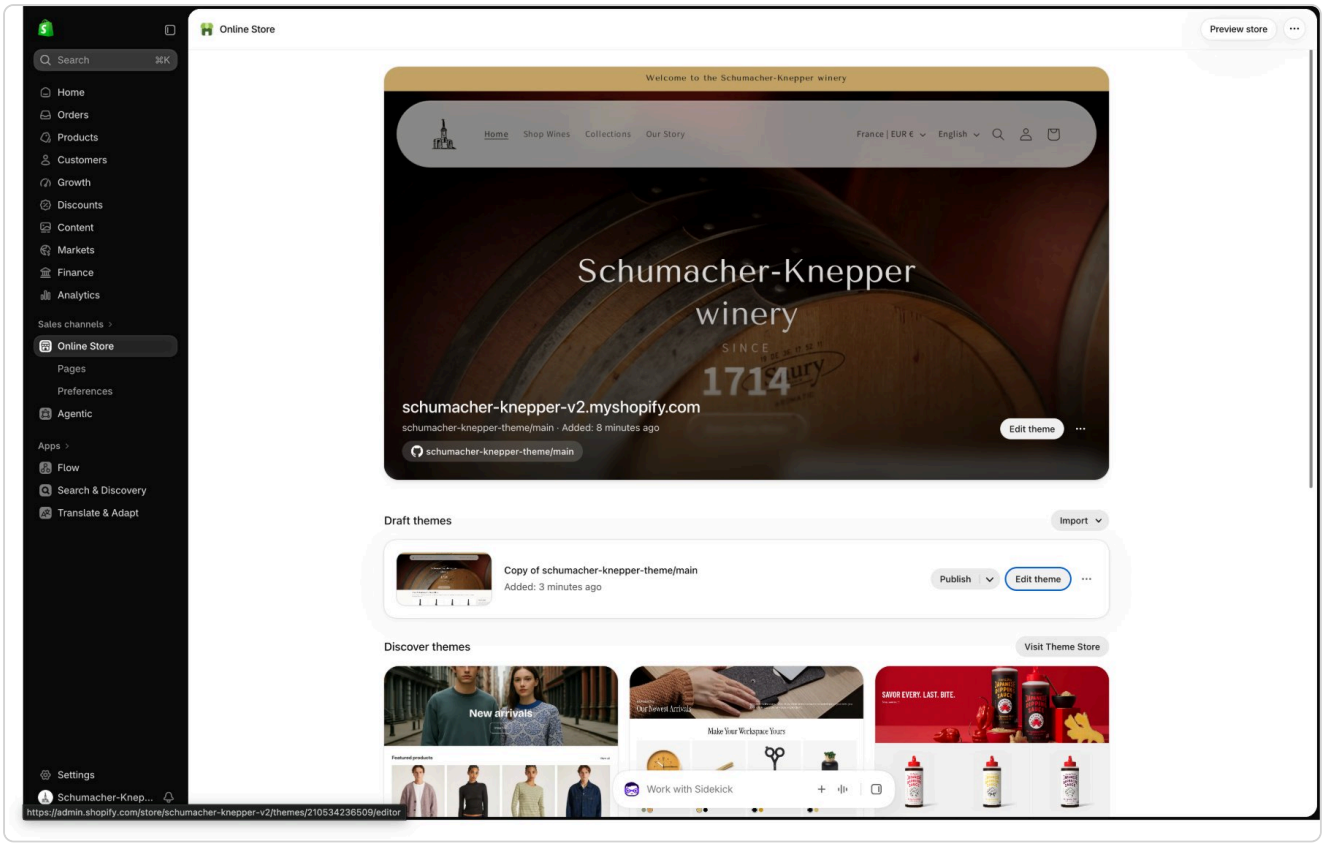

STEP 2 Click on the three dots (**...**) next to the current theme.

STEP 3 Click on **Duplicate**. Always work on a copy so you don't break the live theme.

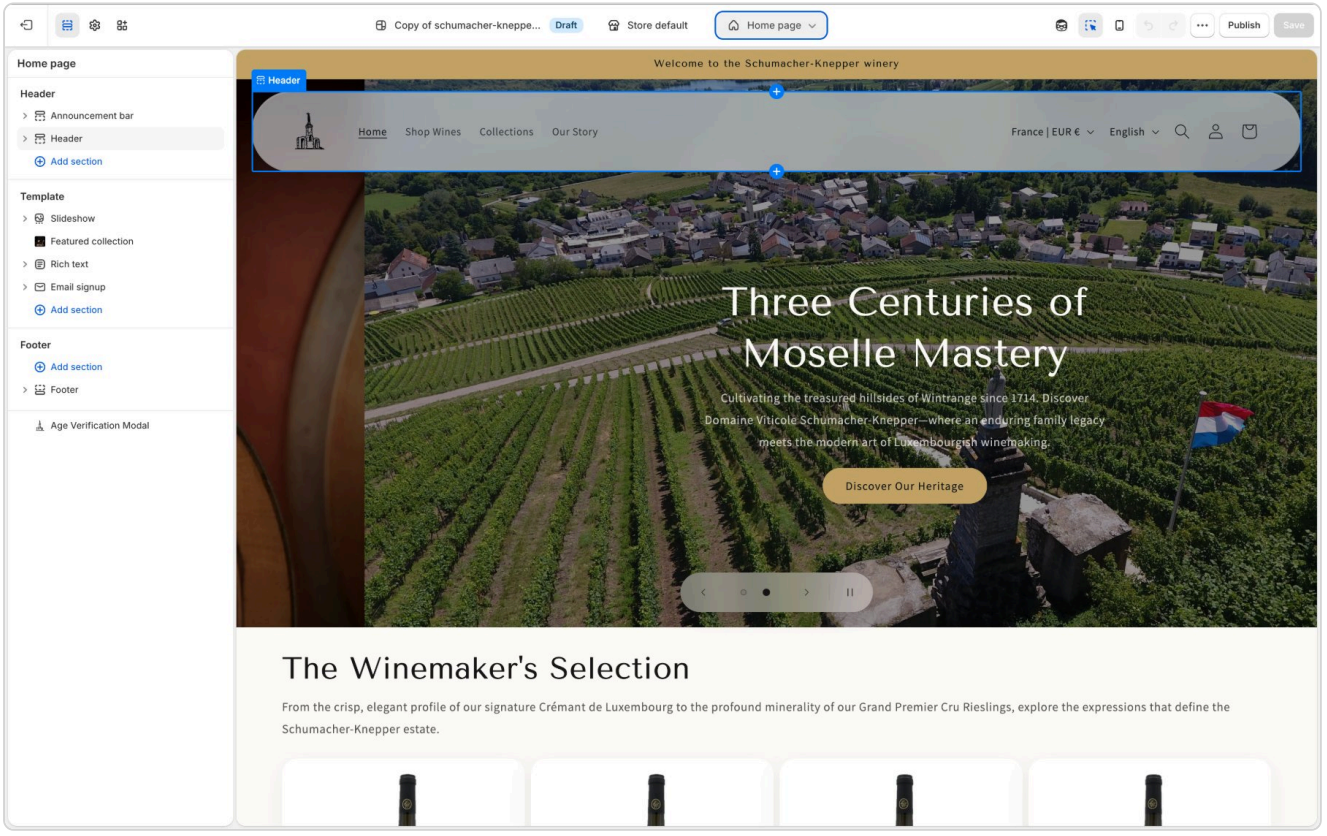

STEP 4 On the copy, click on **Edit theme**.

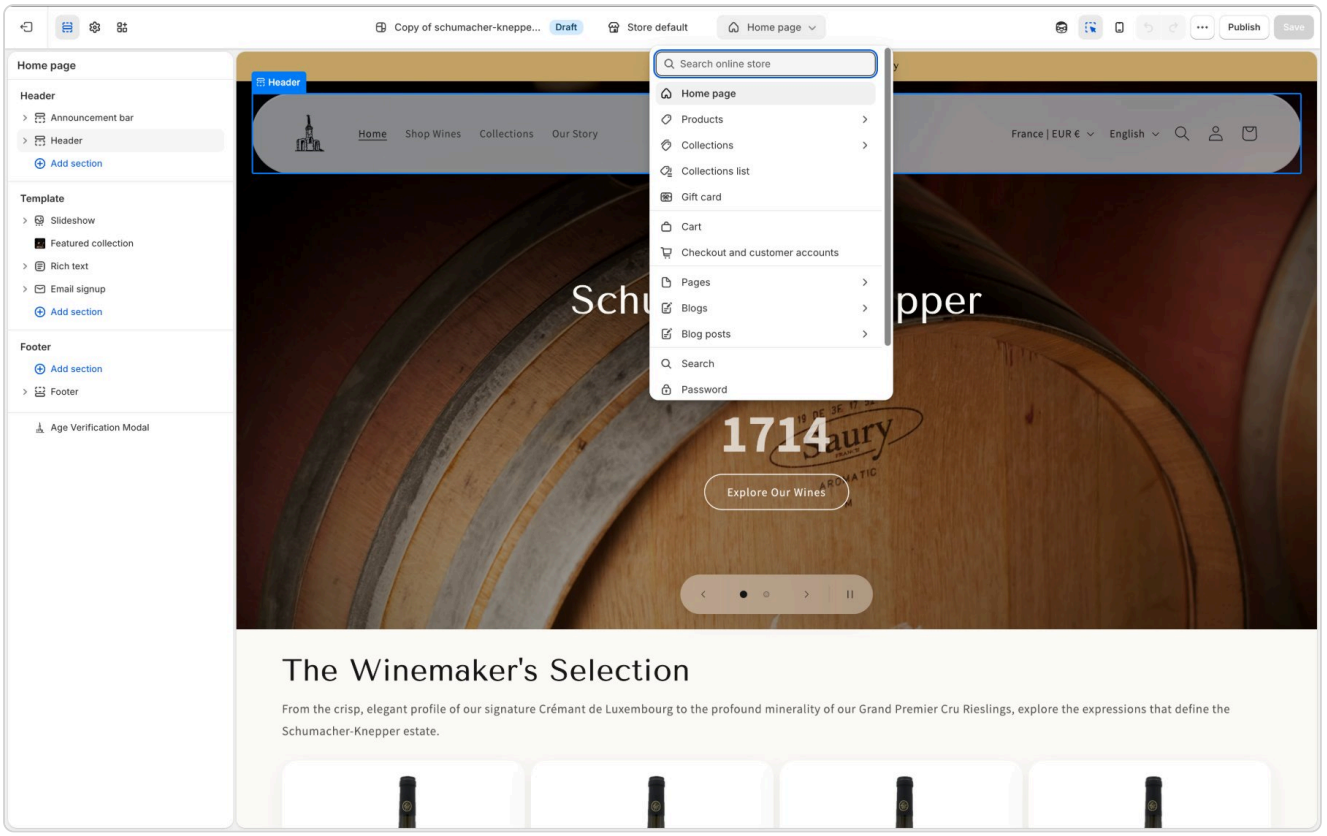

Customize a page

STEP 5 To customize a page, click on **Home page** at the top of the editor.

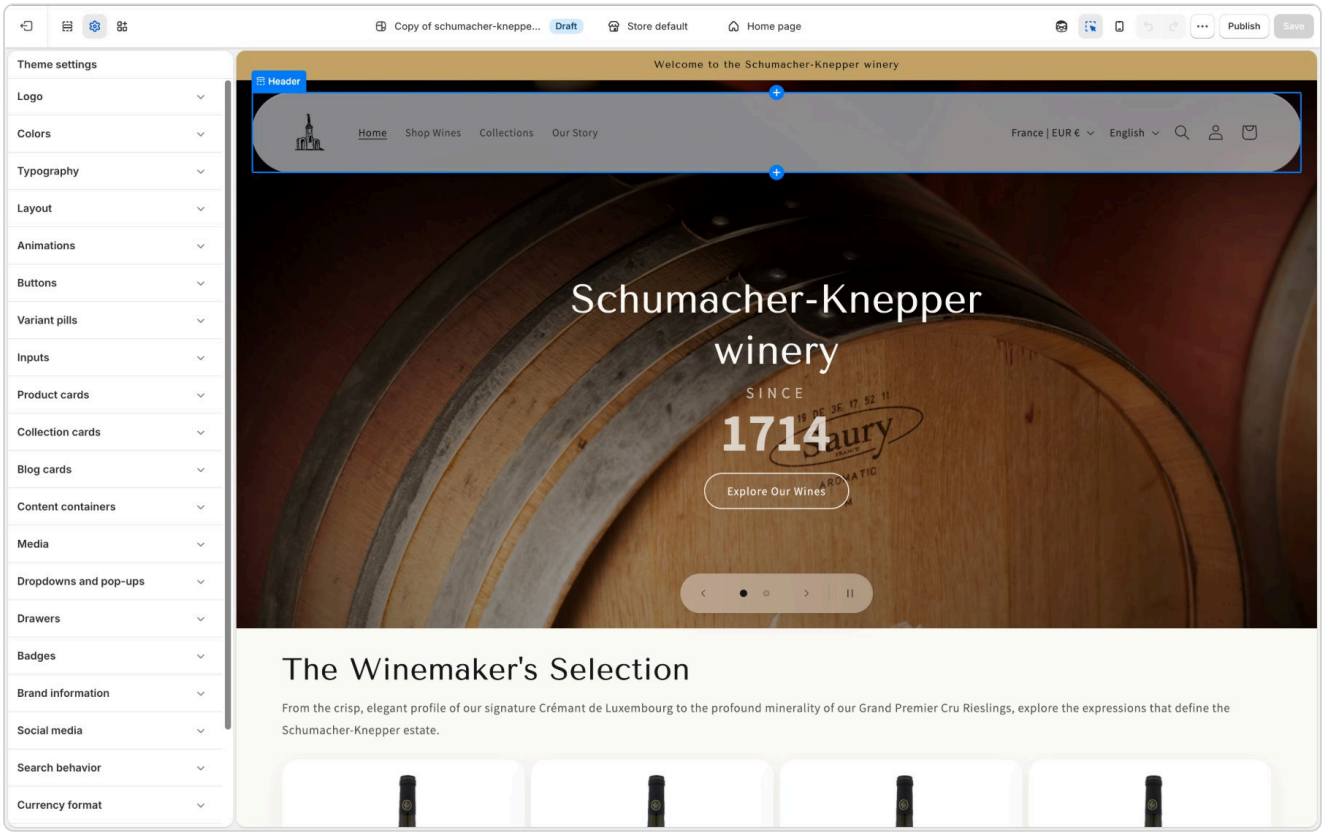

STEP 6 Select the page you want to edit.

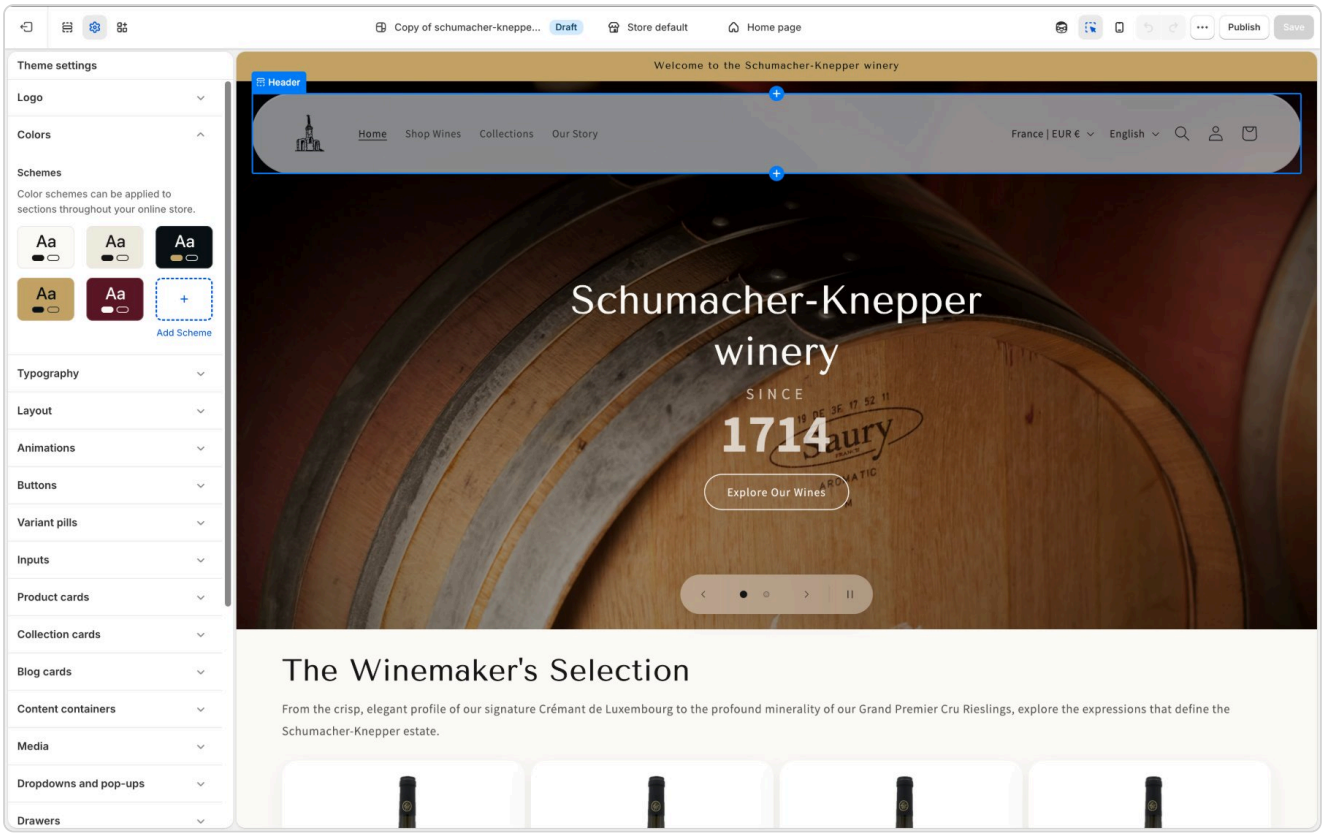

Change the theme settings

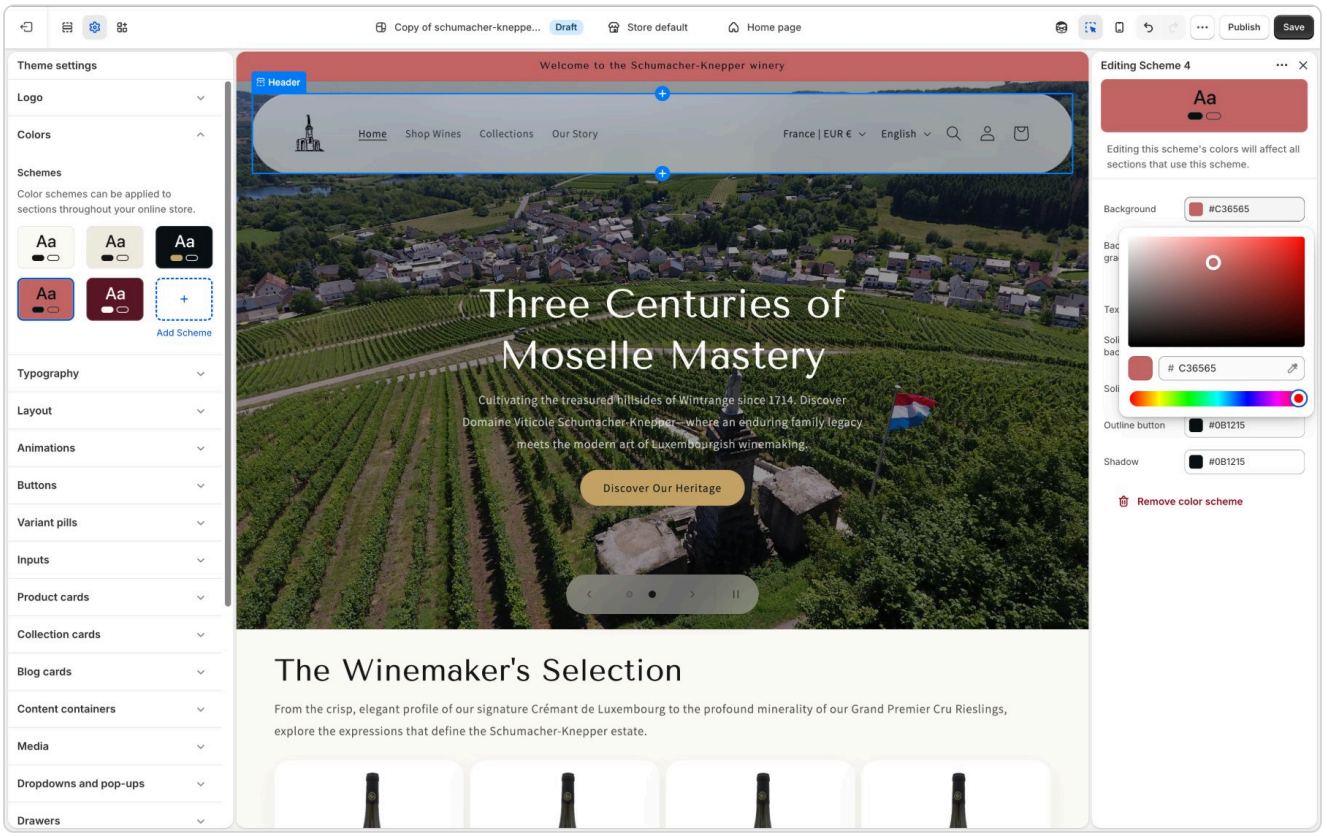

STEP 7 To change the theme settings, click on the gear button in the top-left corner.

STEP 8 To change the color schemes, click on **Colors**.

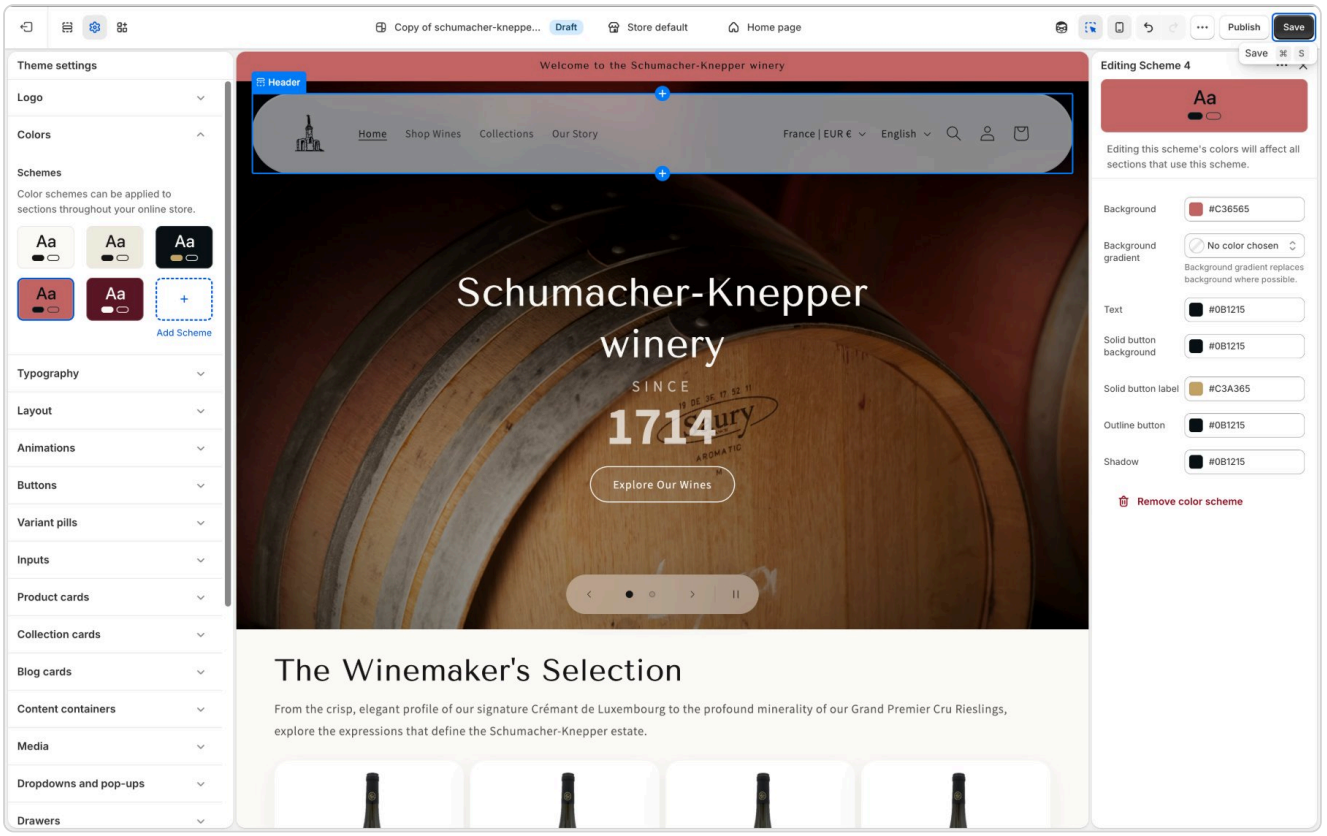

STEP 9 Change the colors in the panel on the right.

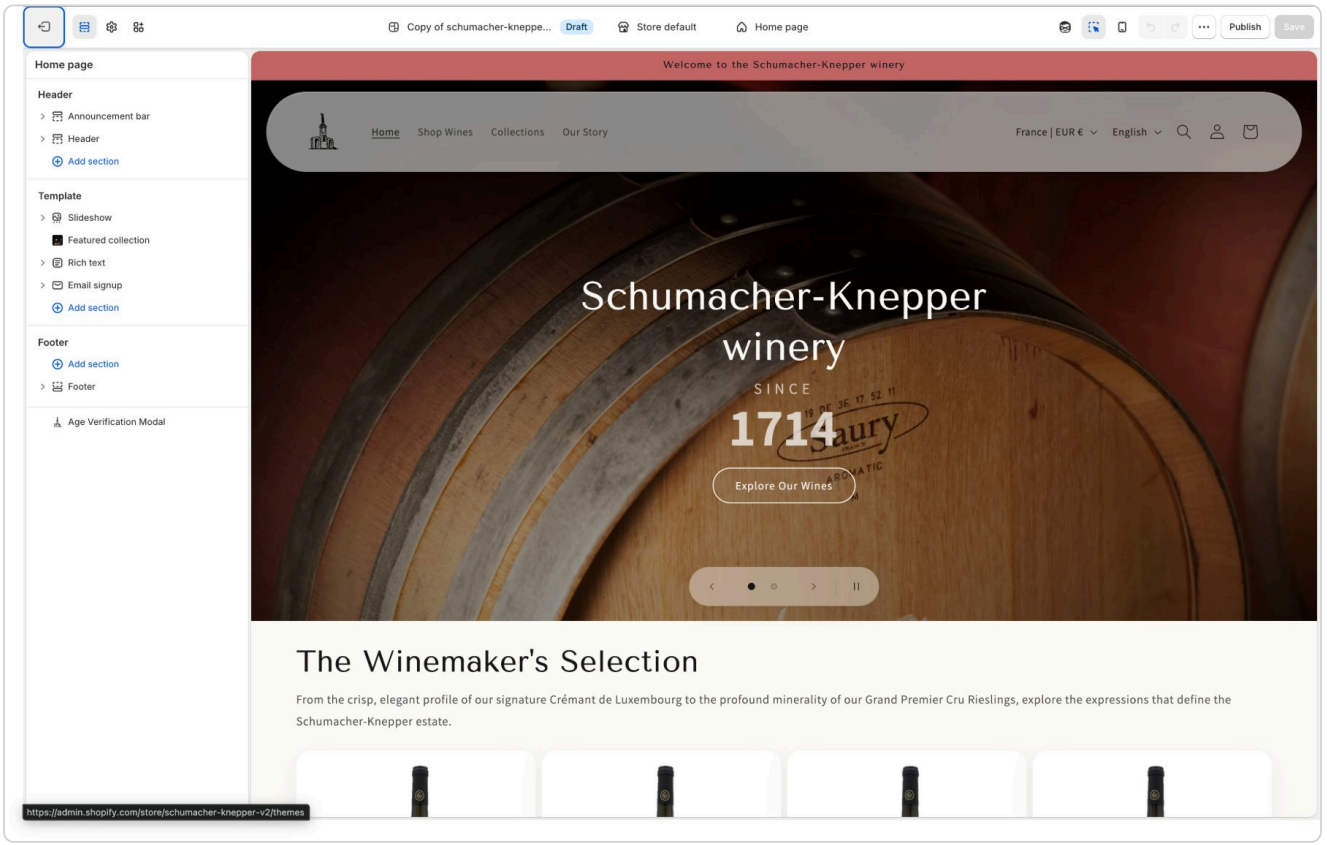

Save and publish

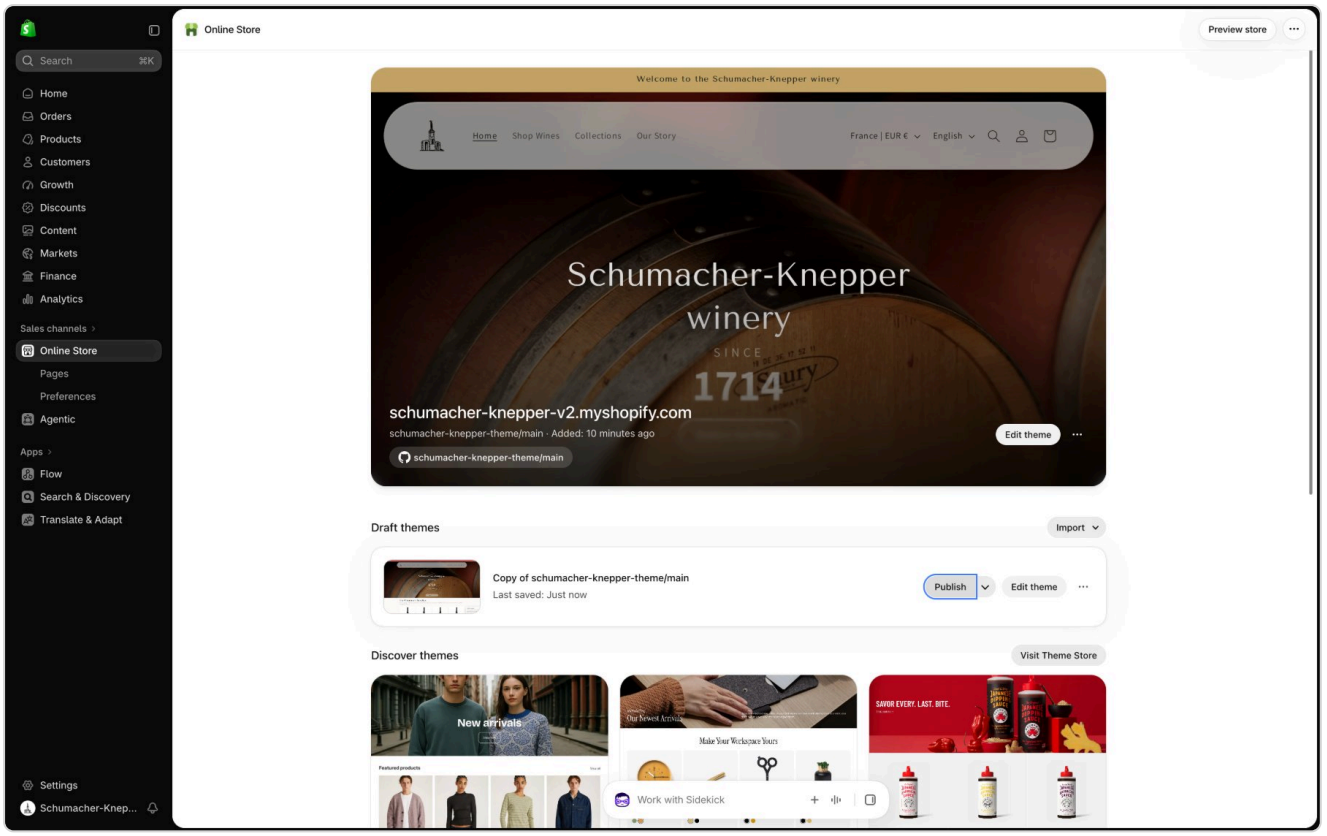

STEP 10 Click on **Save** in the top-right corner. Don't skip this step.

STEP 11 Click on **Exit** in the top-left corner.

STEP 12 Click on **Publish** to make your copy the live theme.

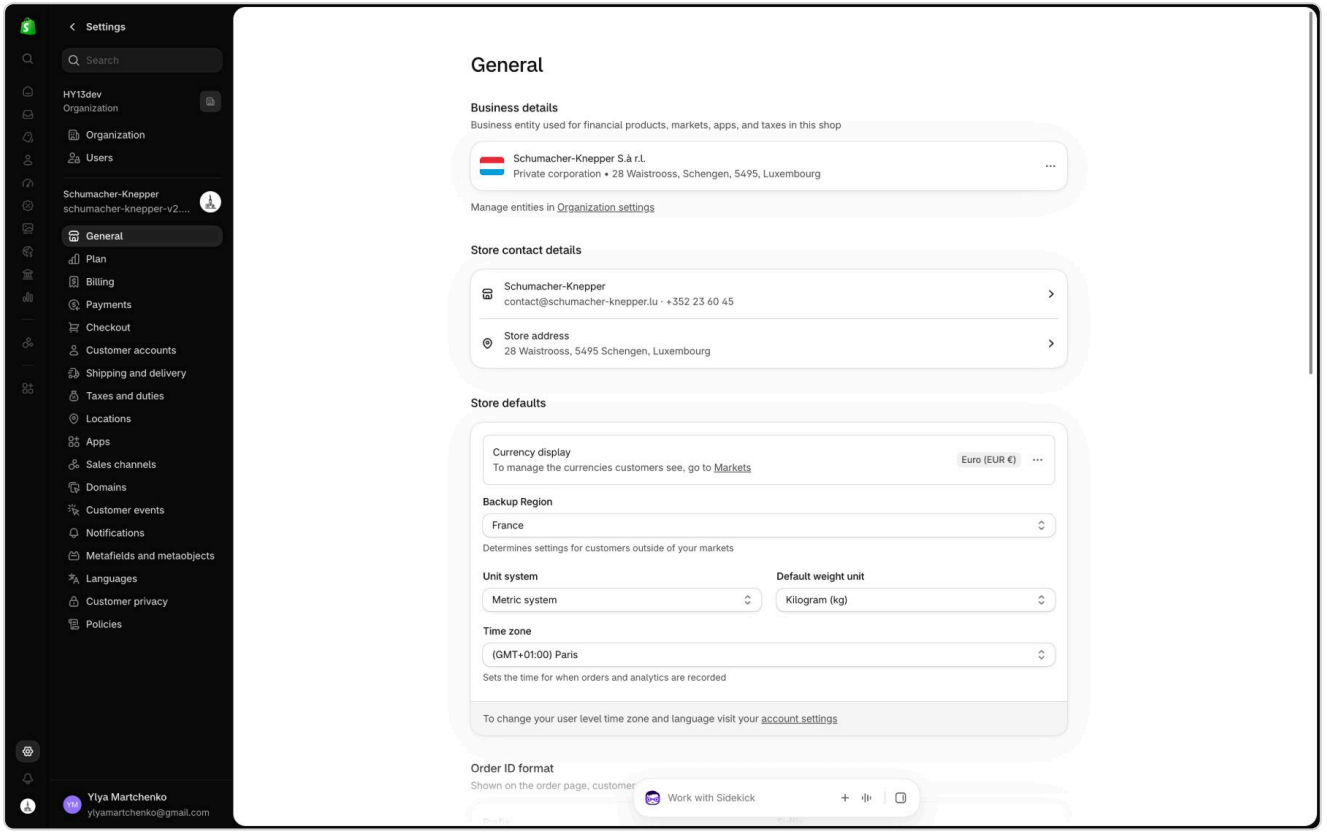

2. Filters, collections and products

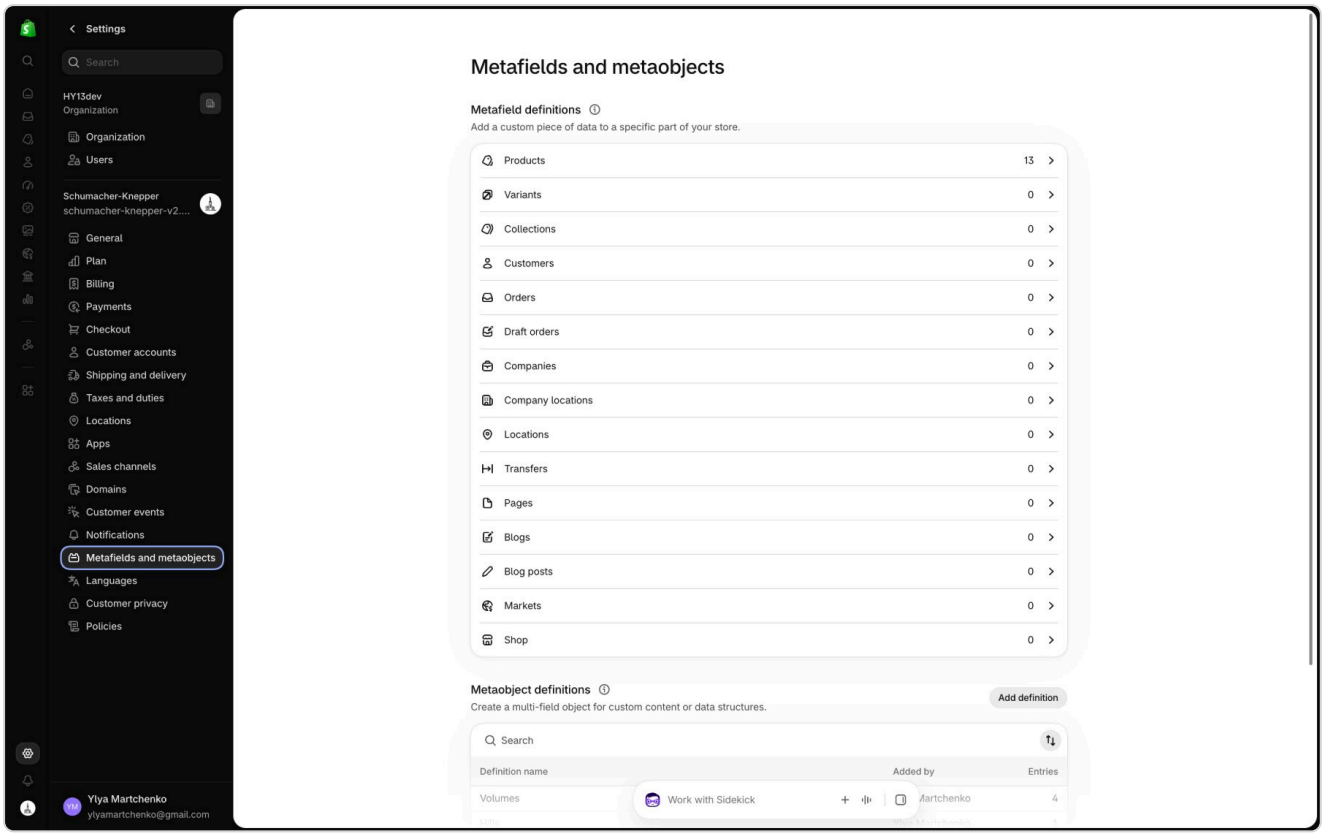

Store filters (for example *Volume*) come from **metaobjects**. To add a filter, you create a metaobject definition, add its entries, then register it as a filter in the **Search & Discovery** app.

Create a metaobject definition

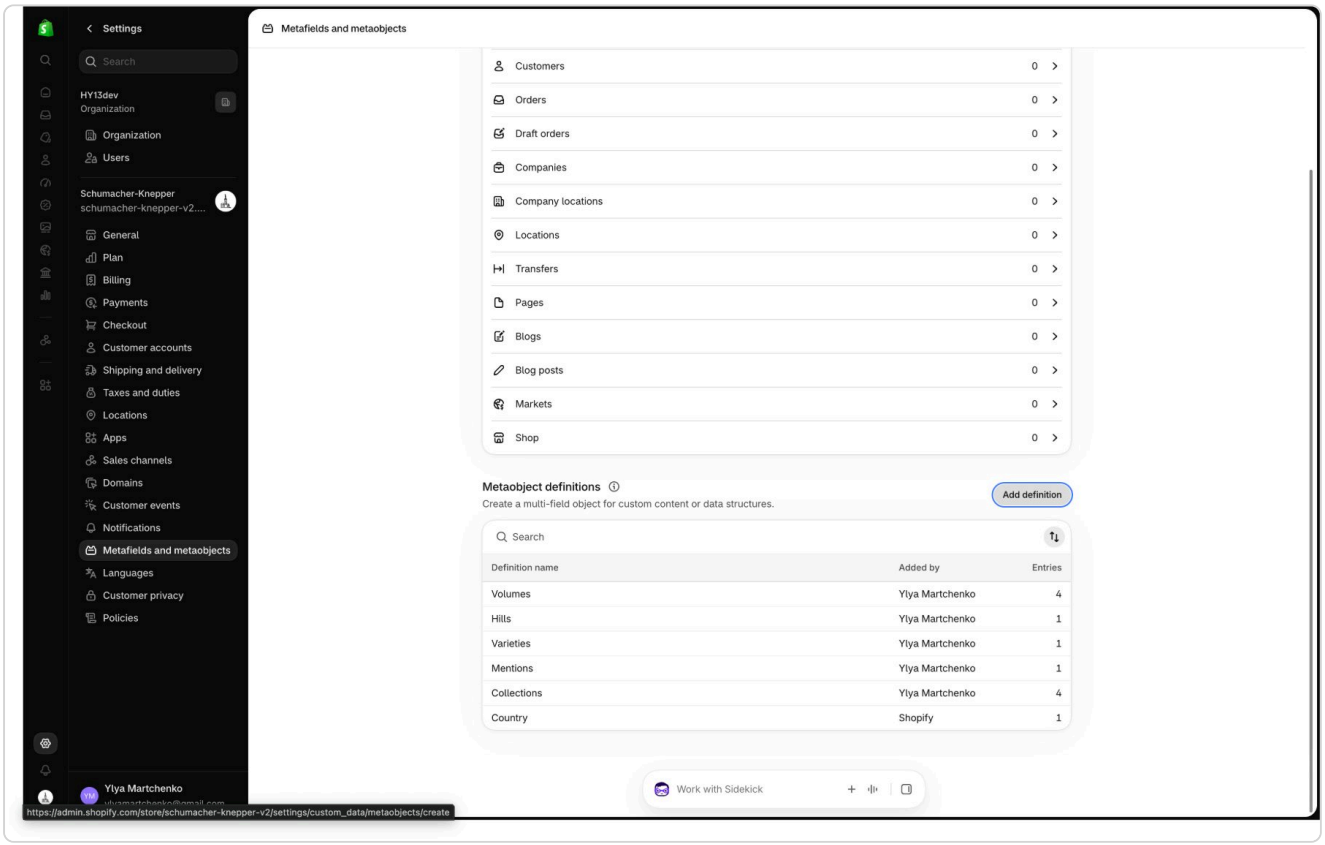

STEP 1 Click on the gear icon in the bottom-left corner to open **Settings**.

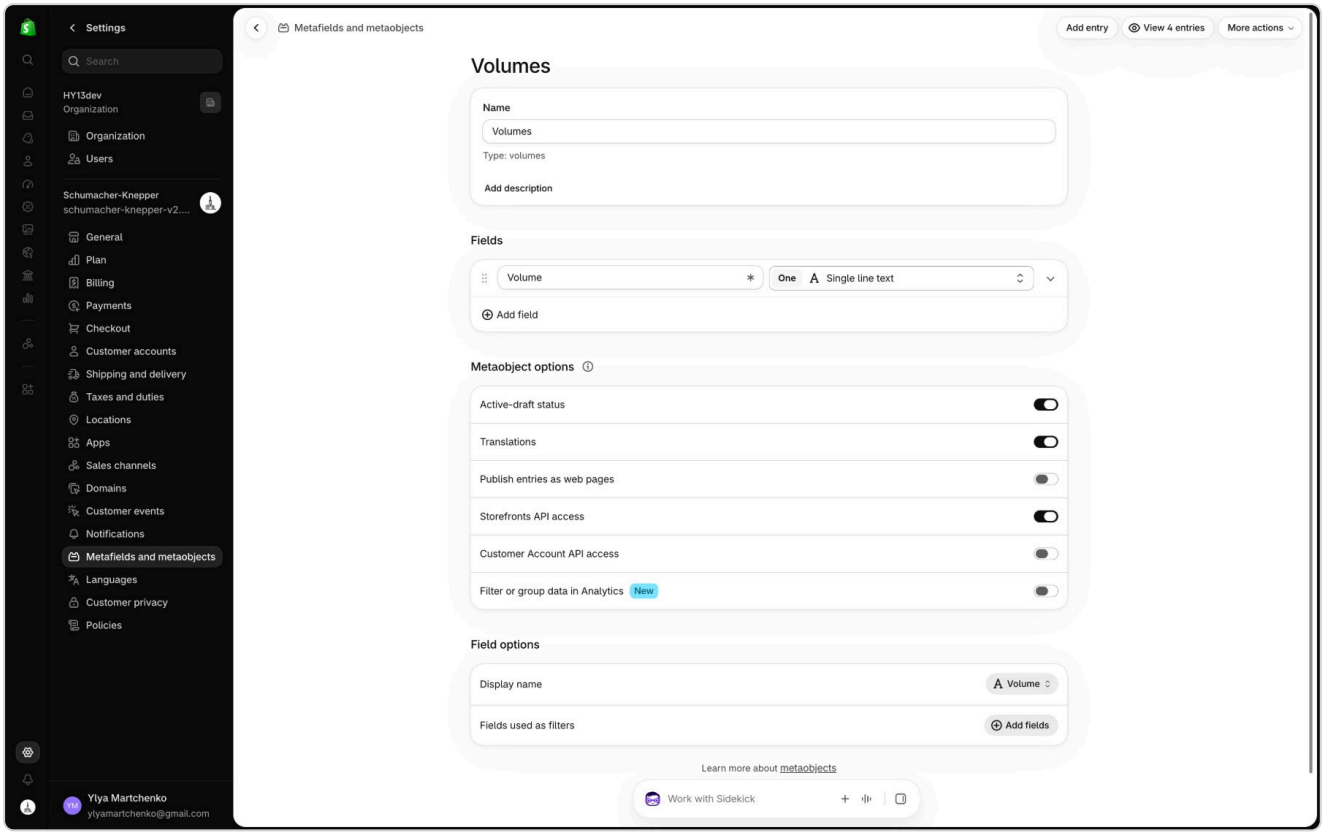

STEP 2 Click on **Metafields and metaobjects**.

STEP 3 Under **Metaobjects**, click on **Add definition**.

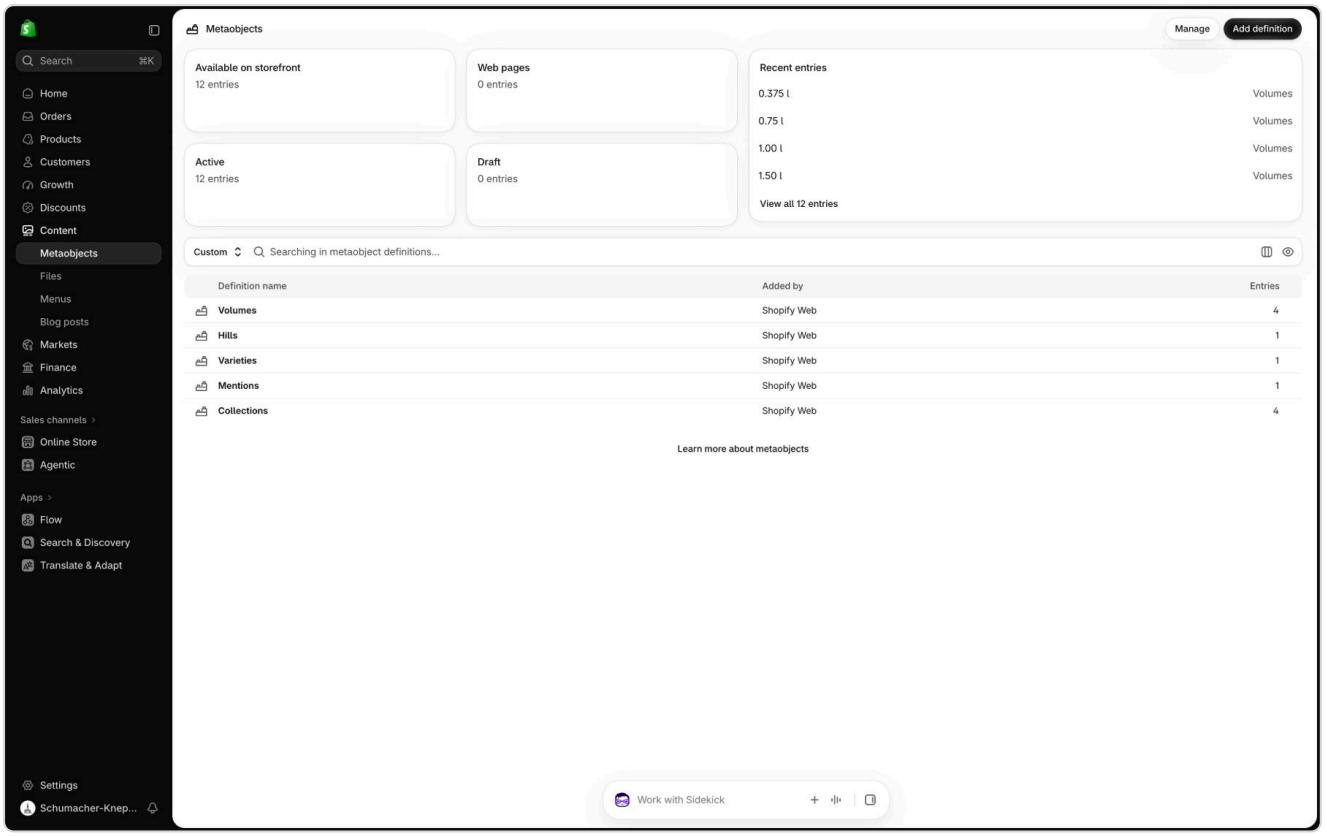

STEP 4 Name the definition in the plural (for example *Volumes*). Name the field in the singular (for example *Volume*) and choose the type **Single line text**.

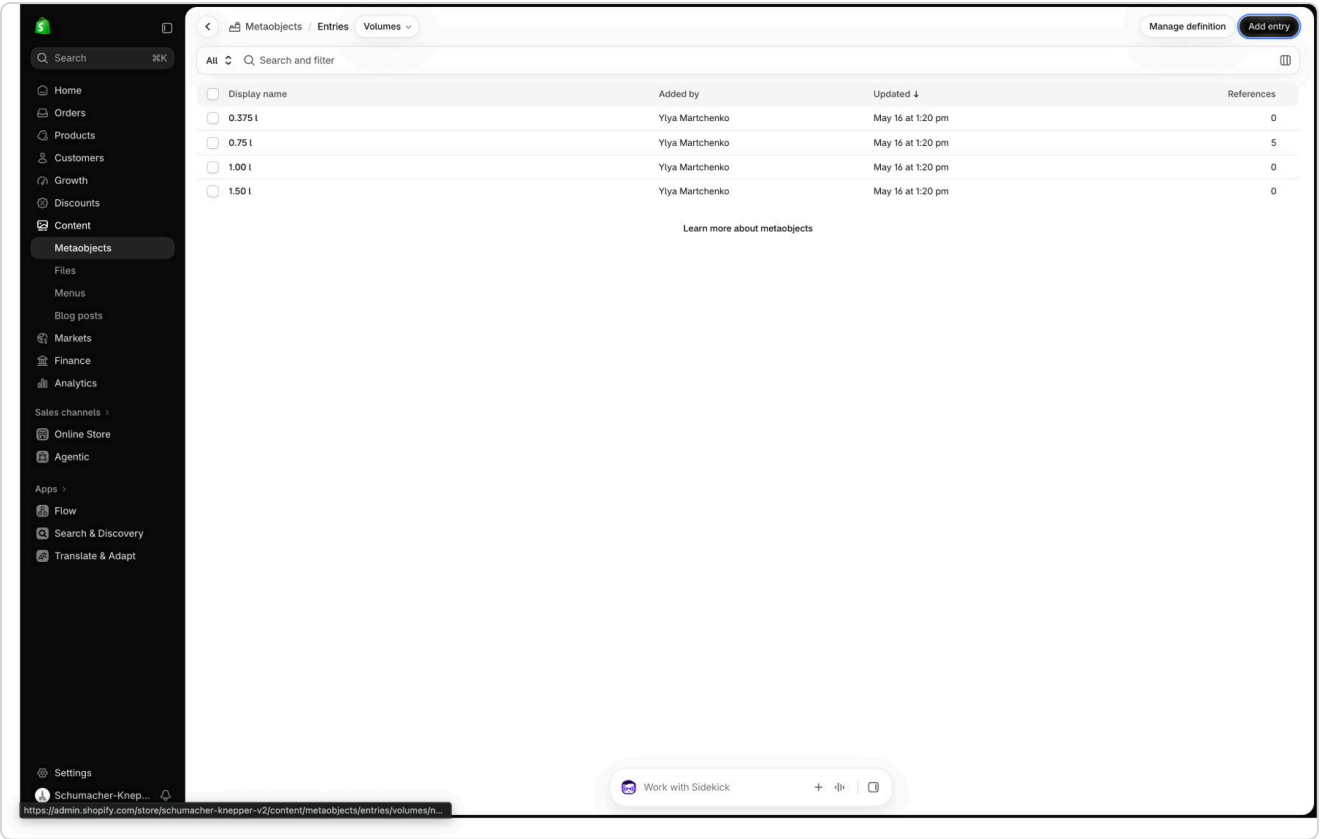

Add entries (filter values)

STEP 5 After saving, go back to the home page, click on **Content** and stay in **Metaobjects**. Choose the metaobject you want.

> **Tip:** There is a faster way to add a metaobject: instead of going through **Settings**, use the **Add** button in the top-right corner of this page.

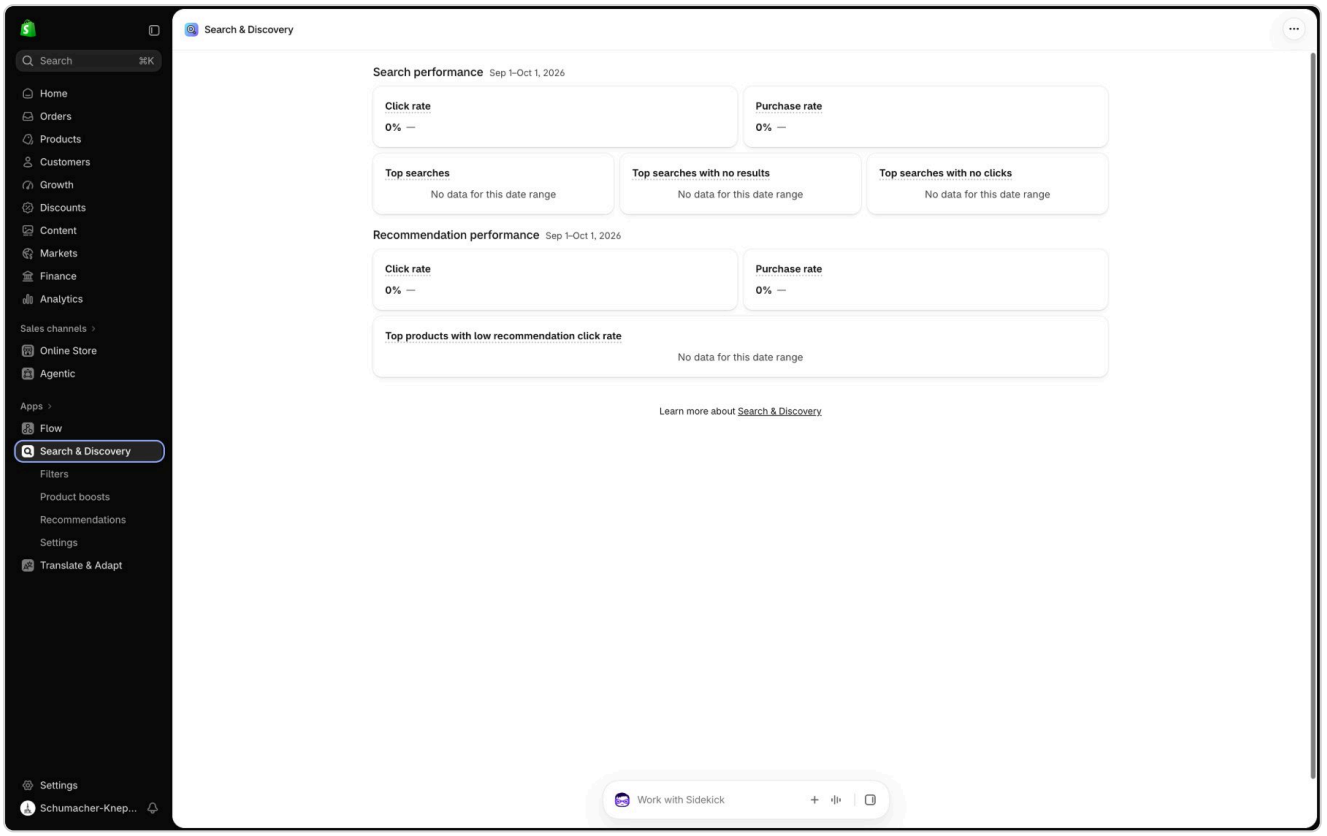

STEP 6 After choosing the metaobject, click on the top-right button to add an entry.

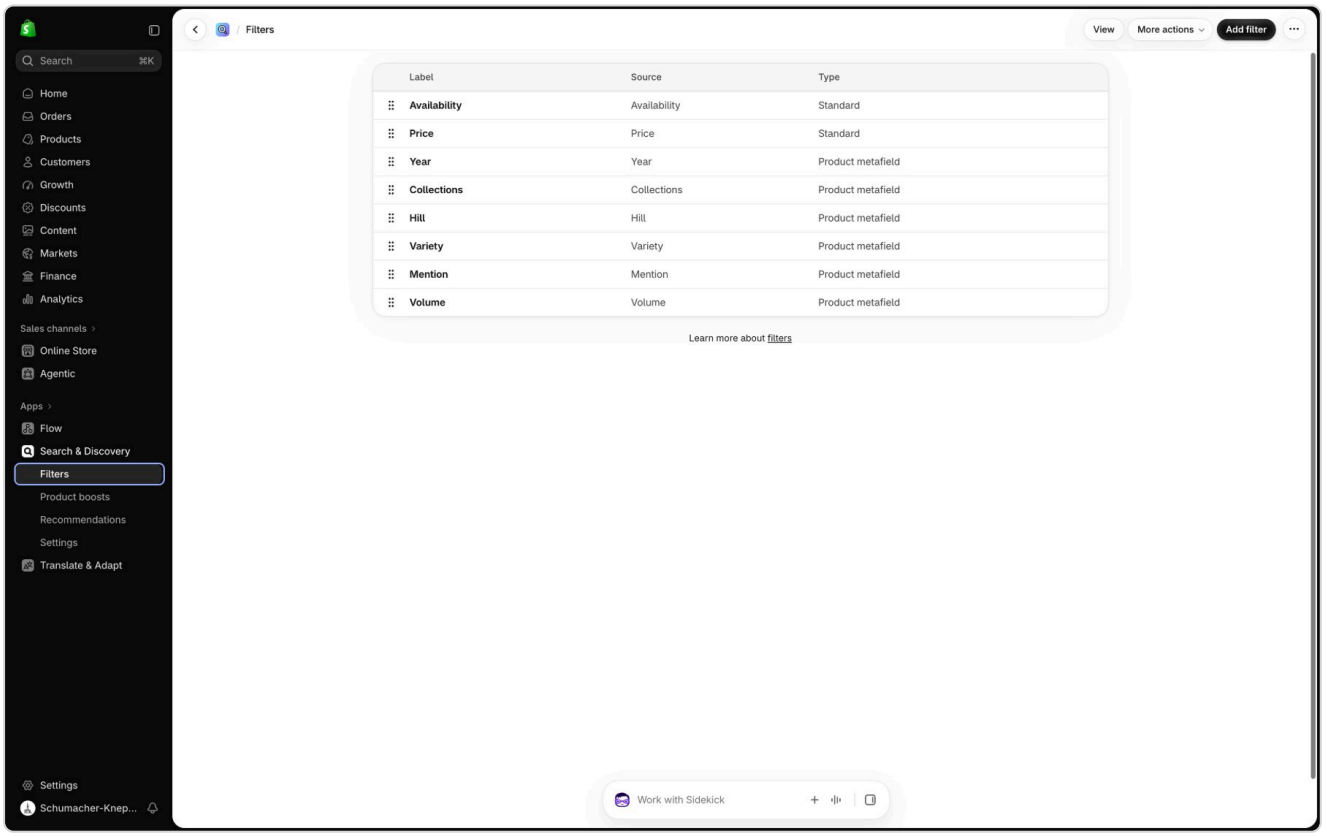

Register the filter in Search & Discovery

> **Note:** Only follow the steps in this section if the metaobject hasn't been added as a filter yet.

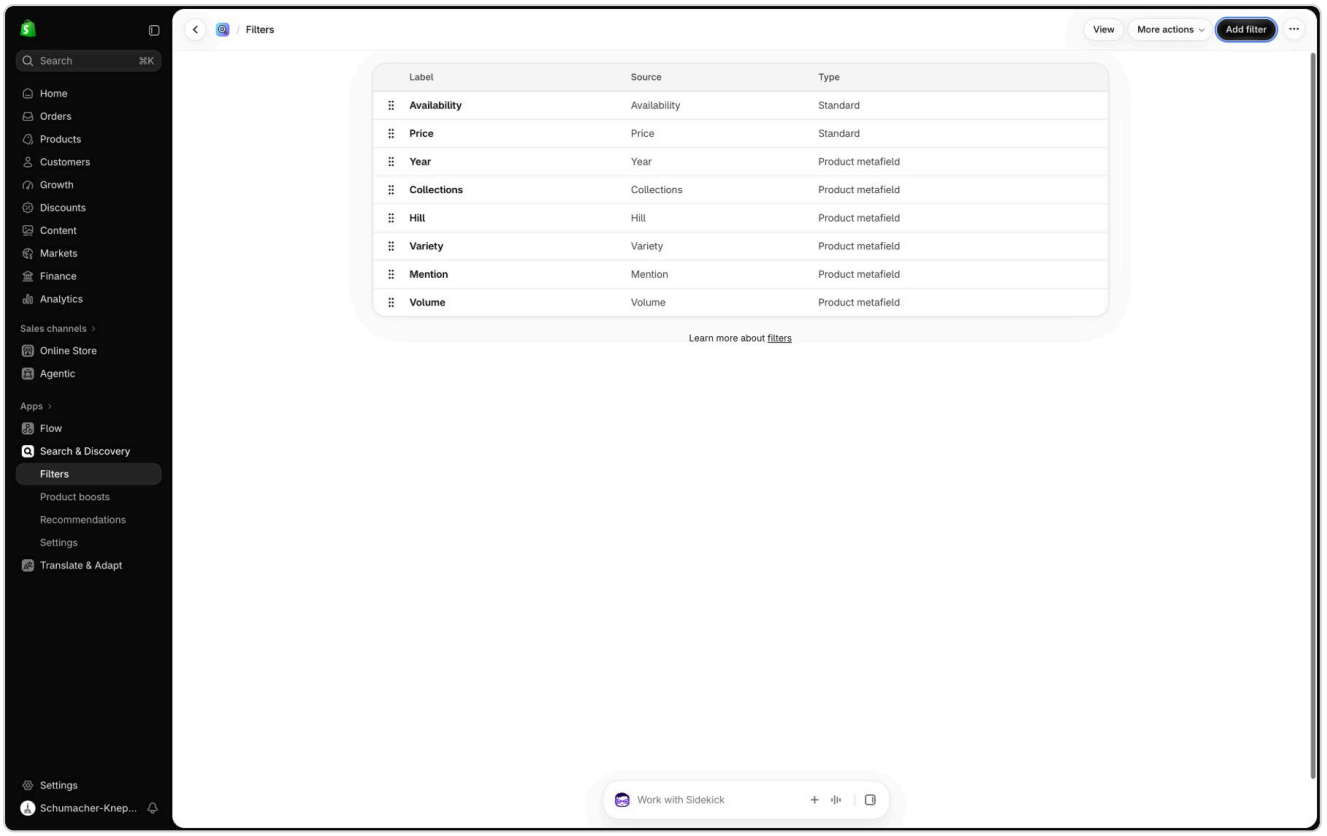

STEP 7 After saving, click on **Search & Discovery**.

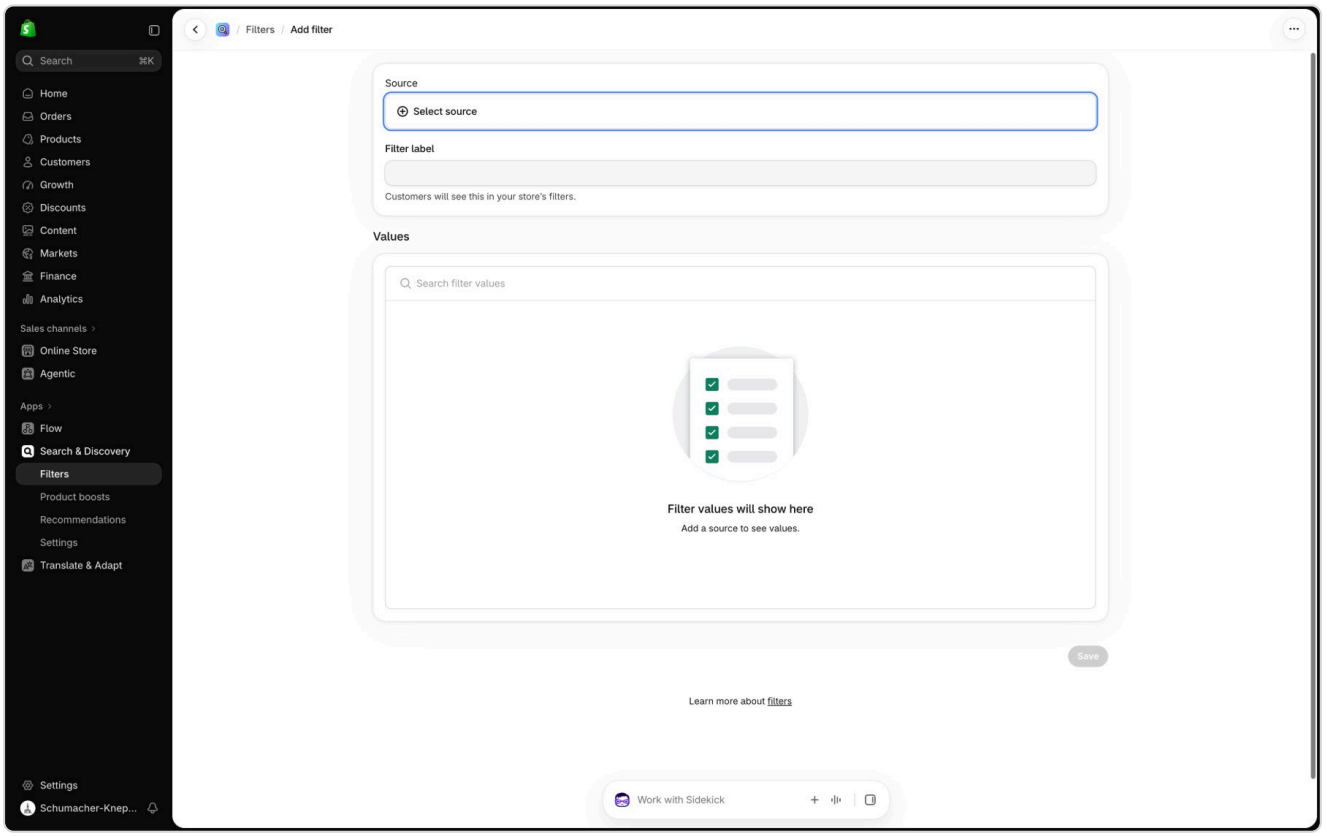

STEP 8 Click on **Filters**.

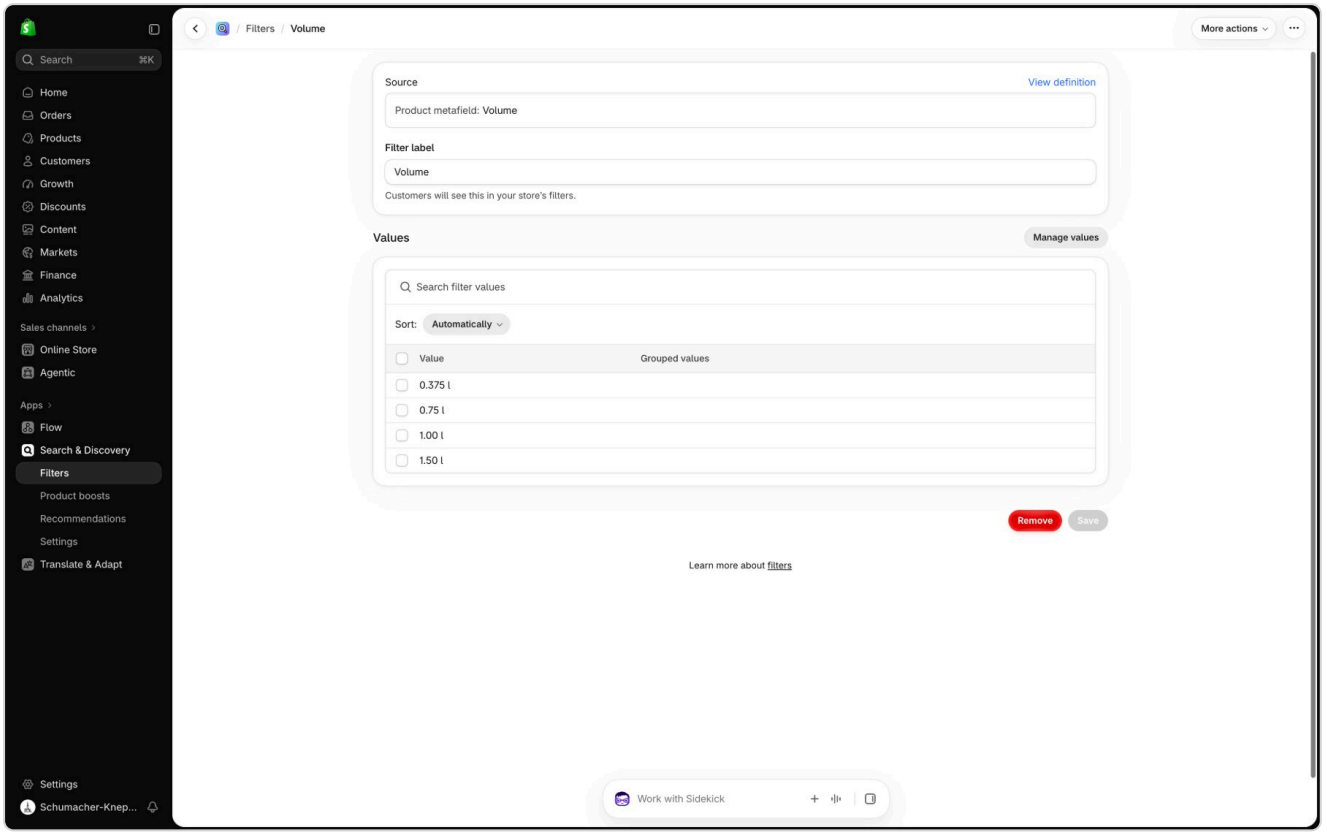

STEP 9 Click on **Add filter**.

STEP 10 Click on **Select source**.

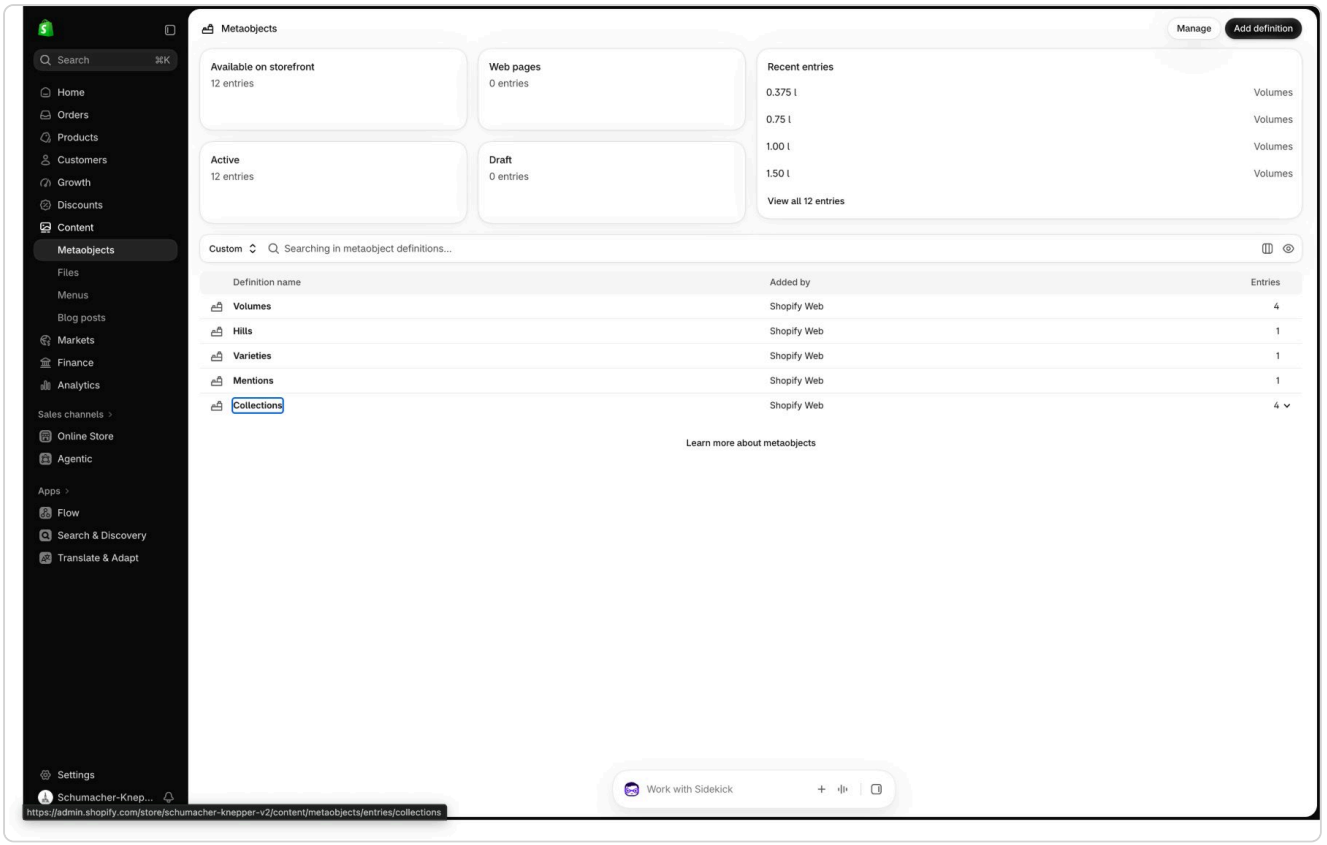

STEP 11 Give the filter the same name as the metafield (for example source *Volume* → filter label *Volume*).

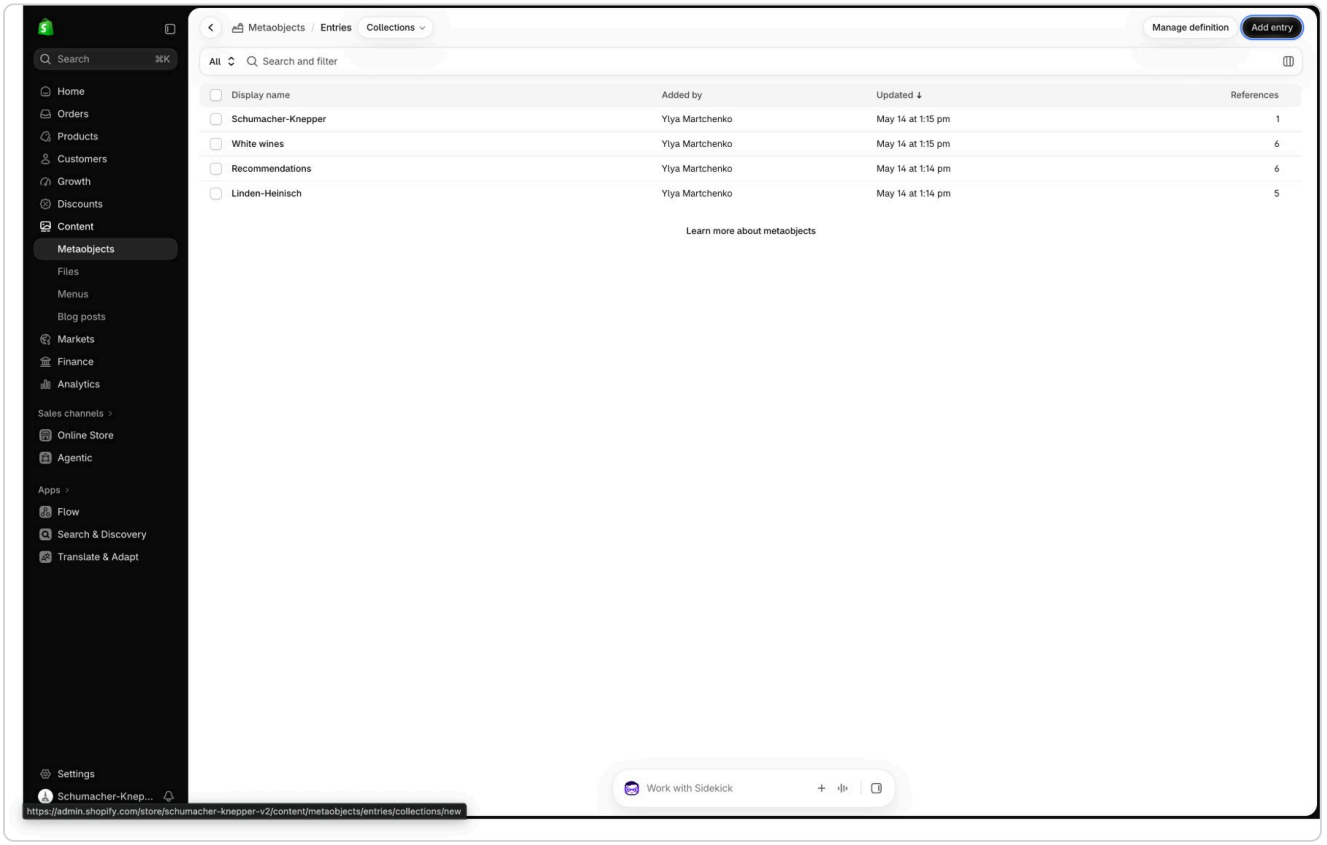

Add a collection

To add a collection, you first add an entry to the **Collections** metaobject. Then you create the collection itself.

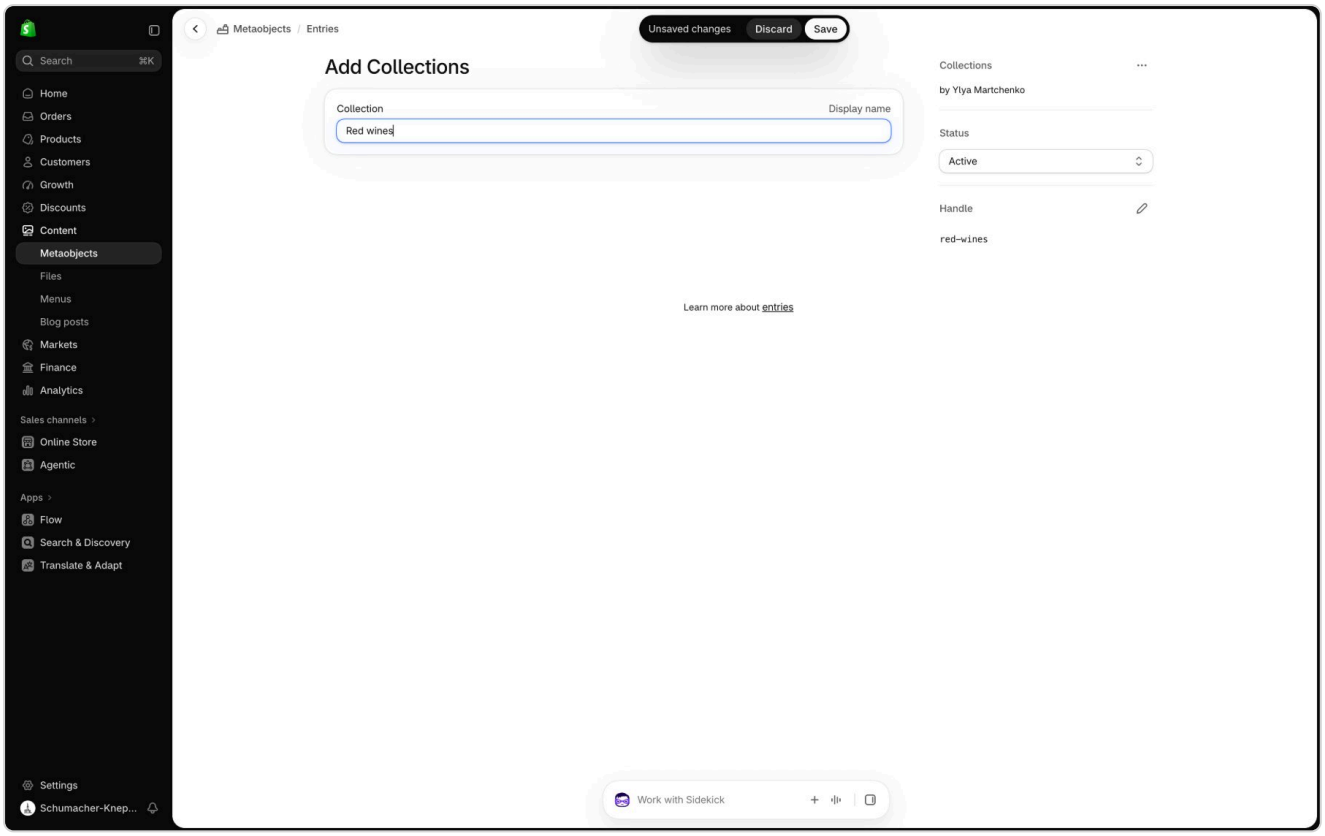

STEP 12 Open the **Collections** metaobject.

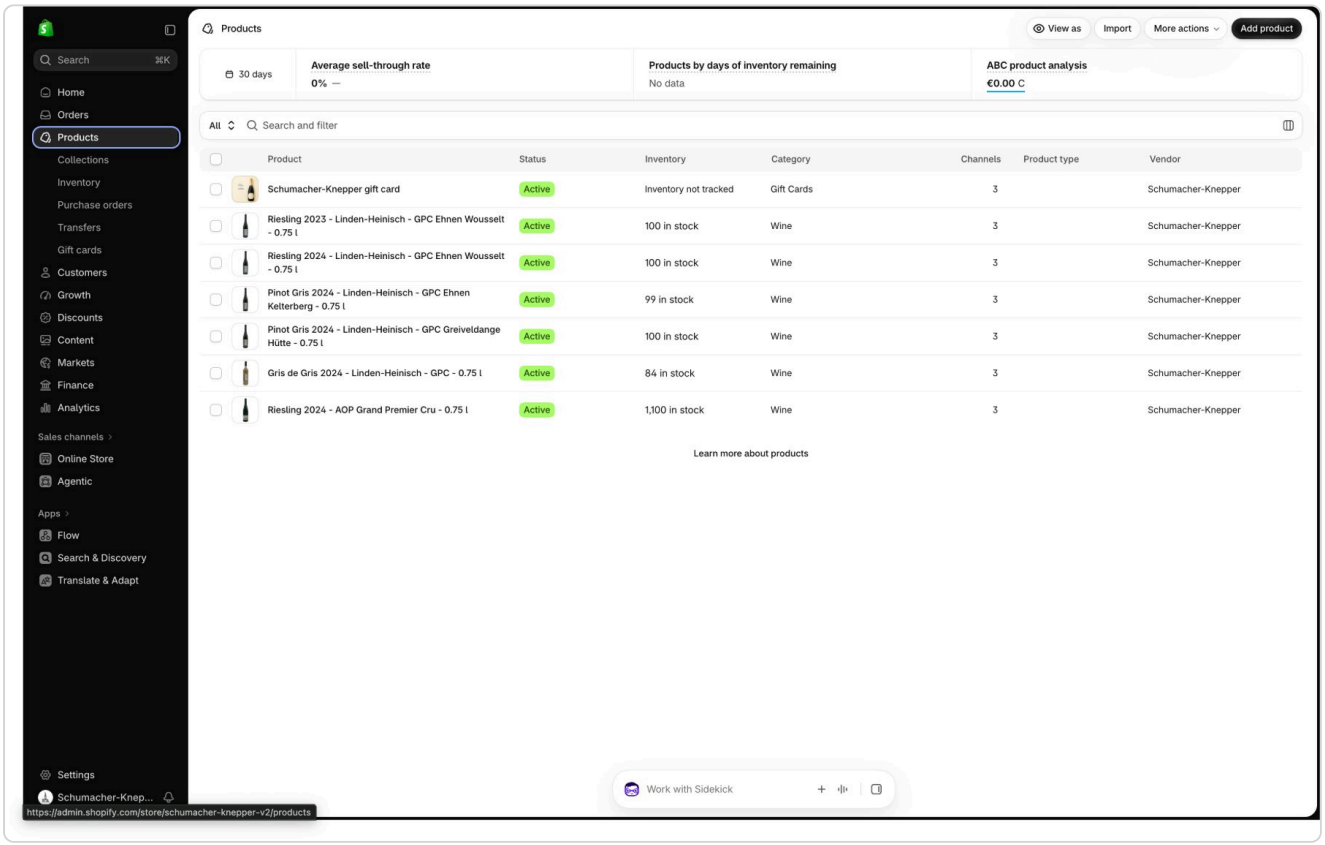

STEP 13 Click on **Add entry**.

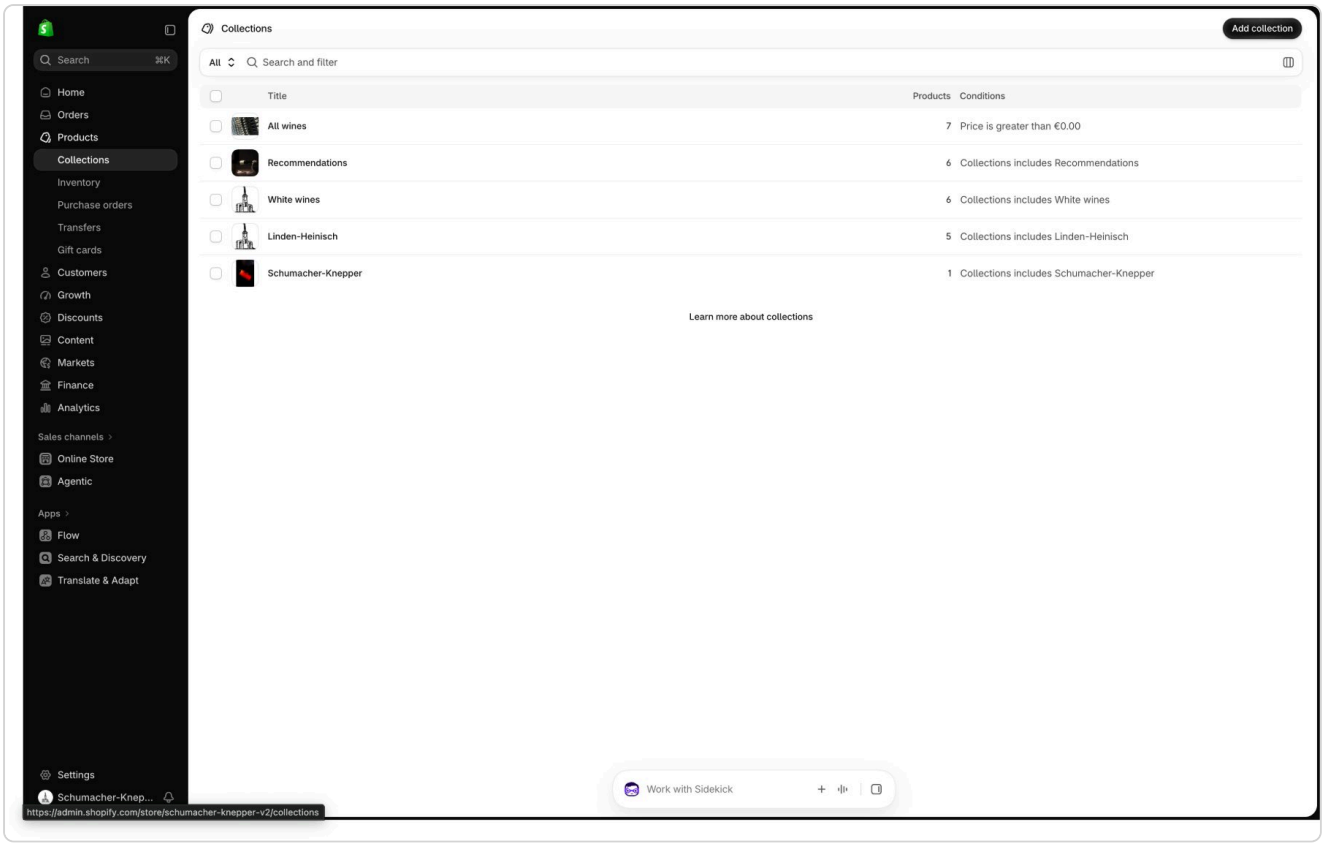

STEP 14 Enter the name of the new collection, then save.

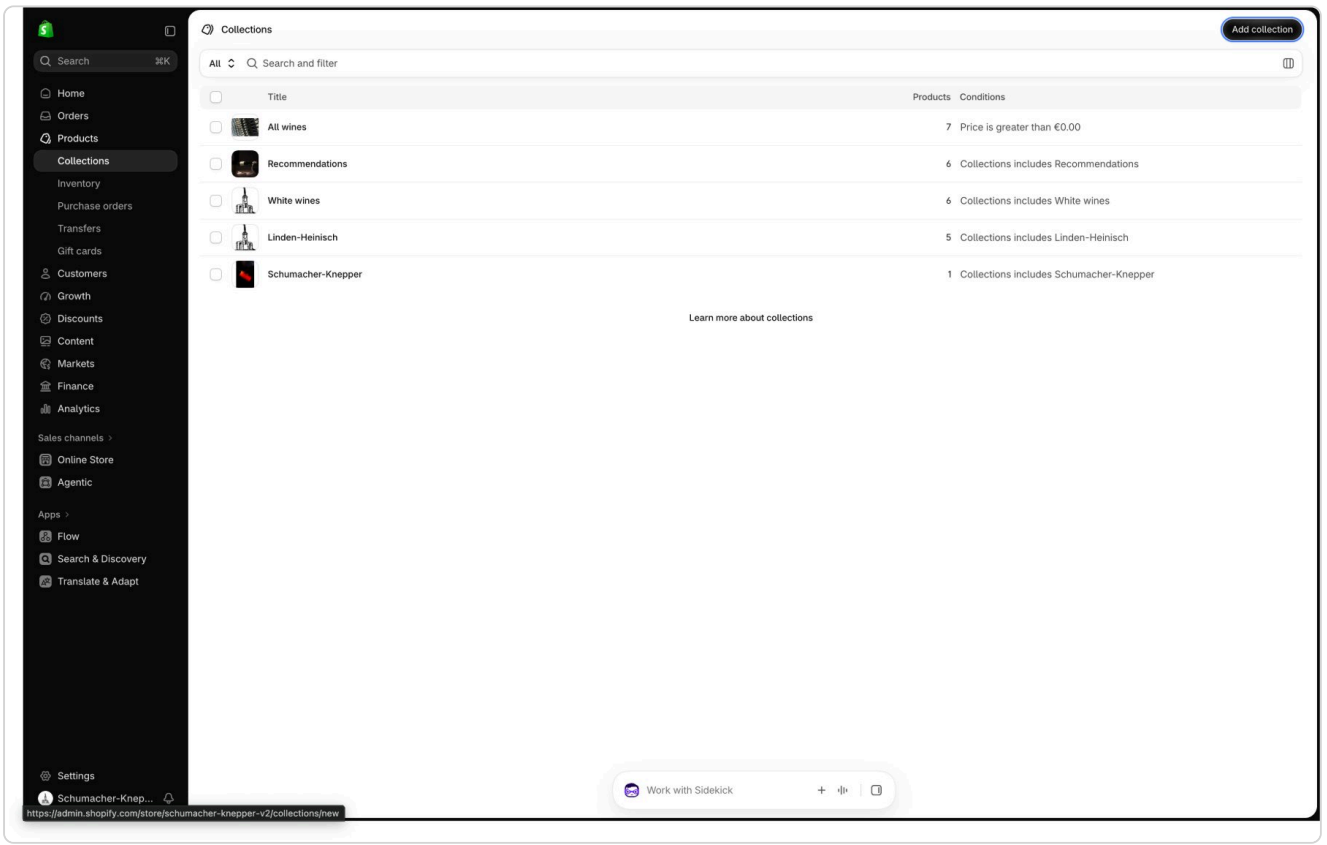

STEP 15 Click on **Products**.

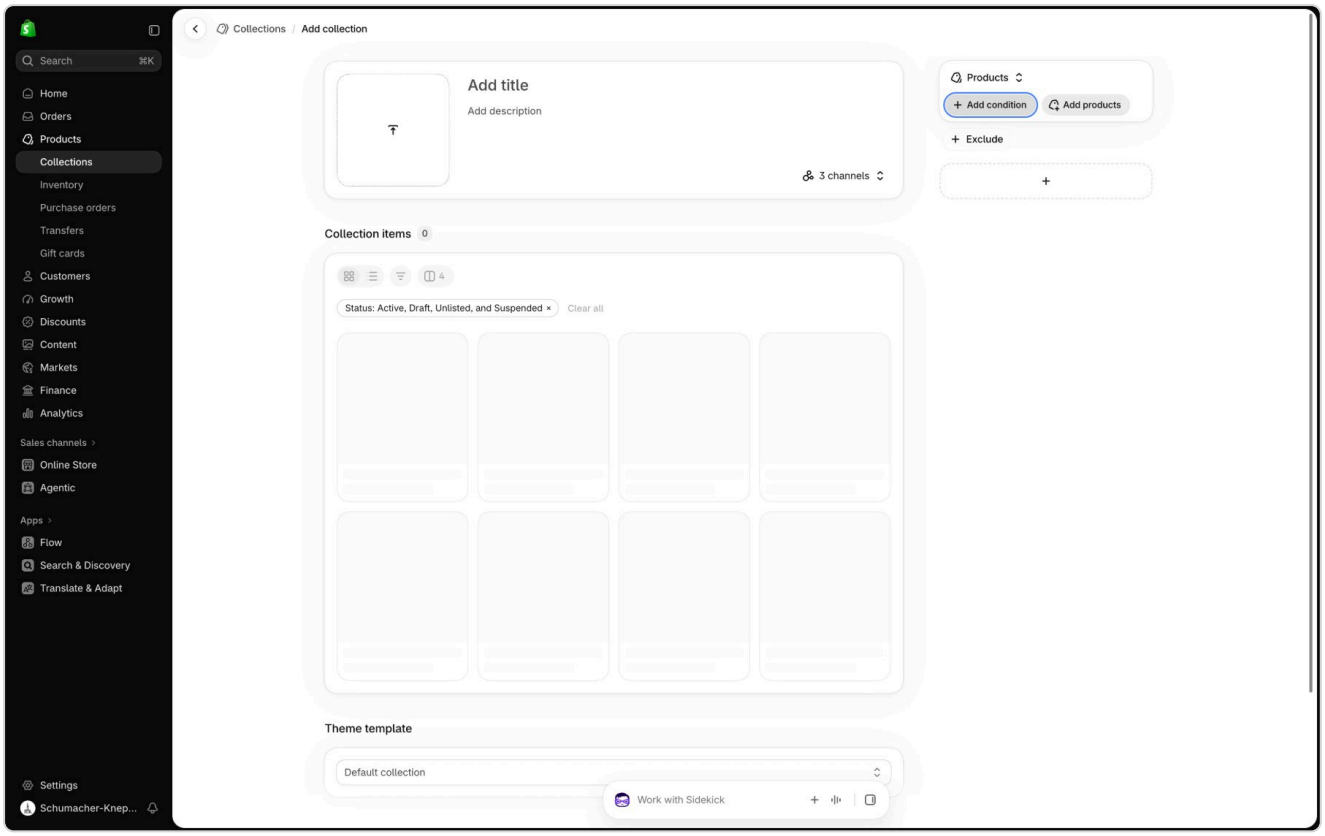

STEP 16 Click on **Collections**.

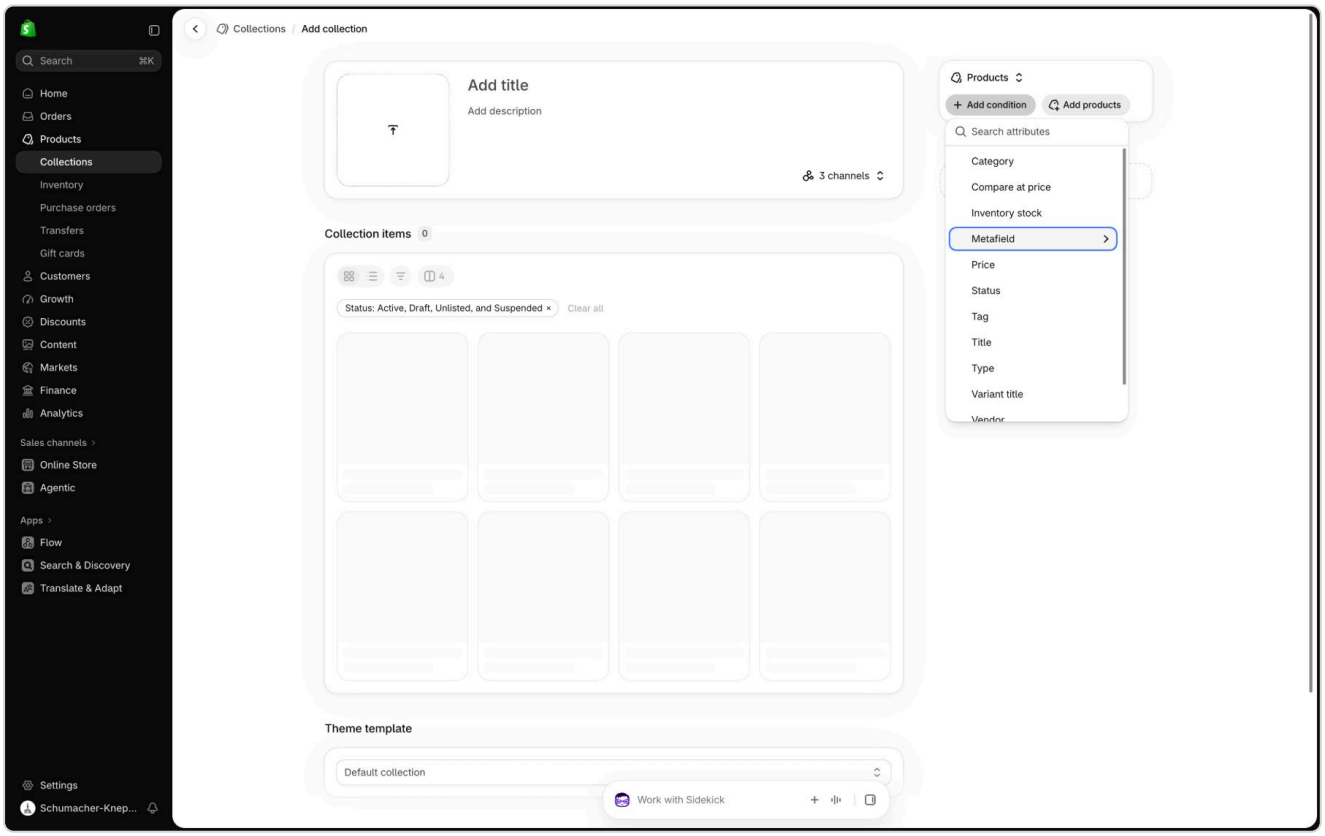

STEP 17 Click on **Add collection**.

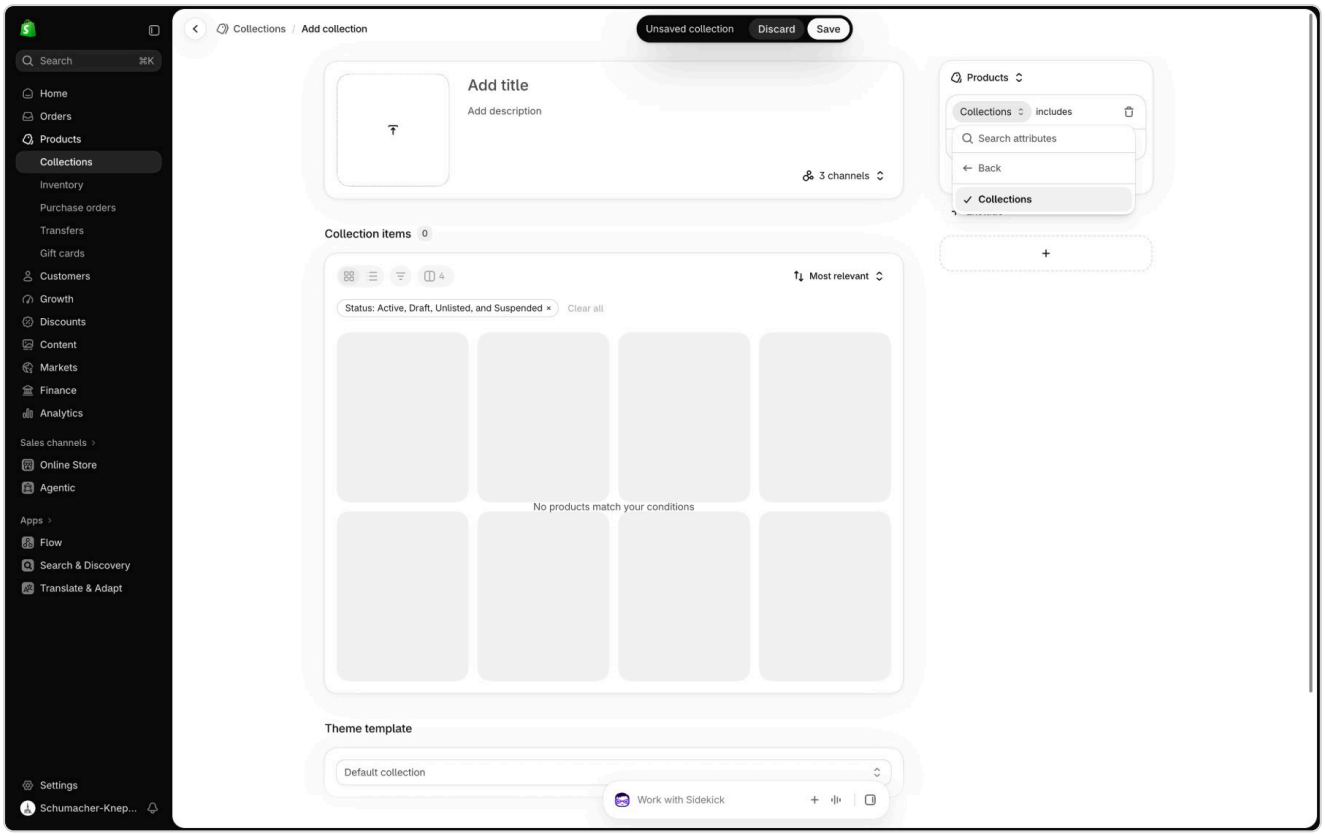

STEP 18 Click on **Add condition**.

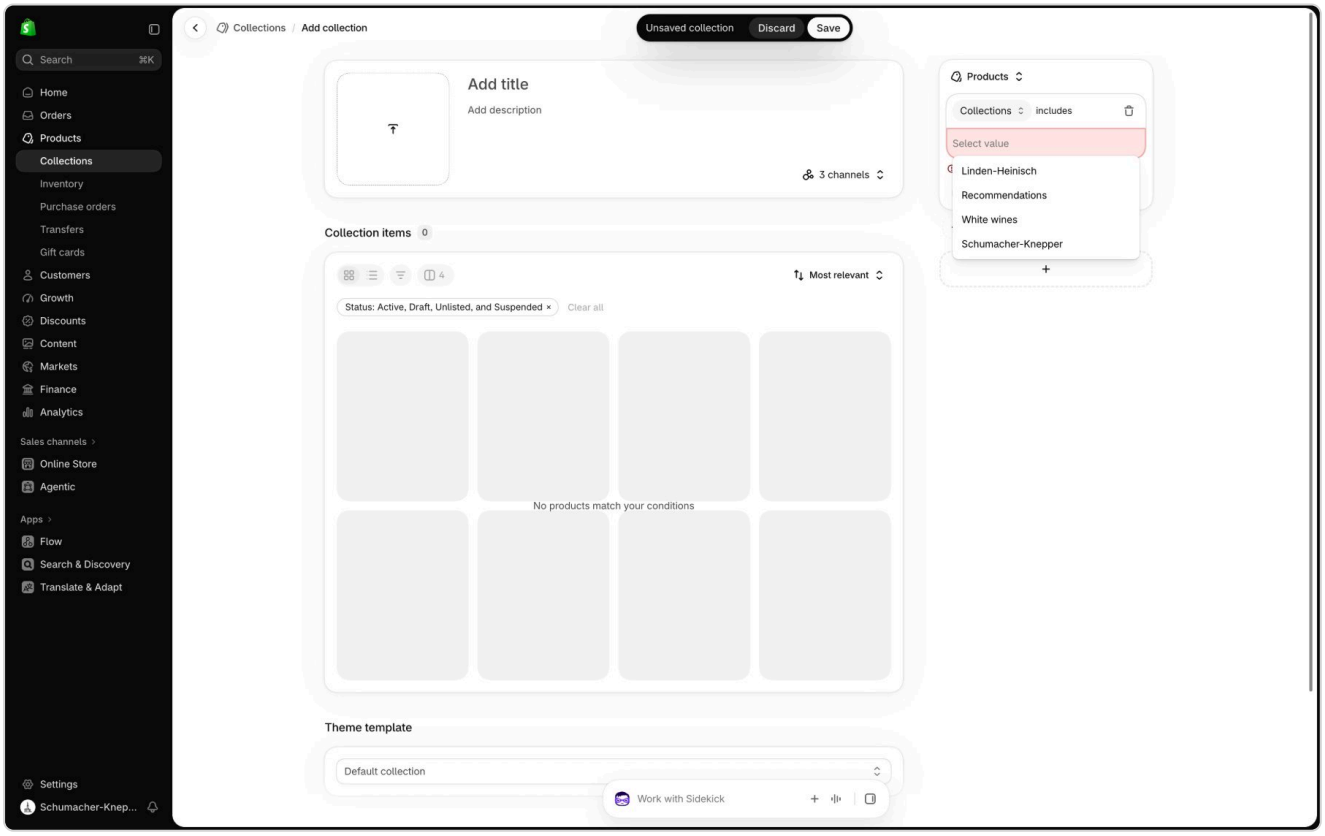

STEP 19 Click on **Metafield**.

STEP 20 Click on **Collections**.

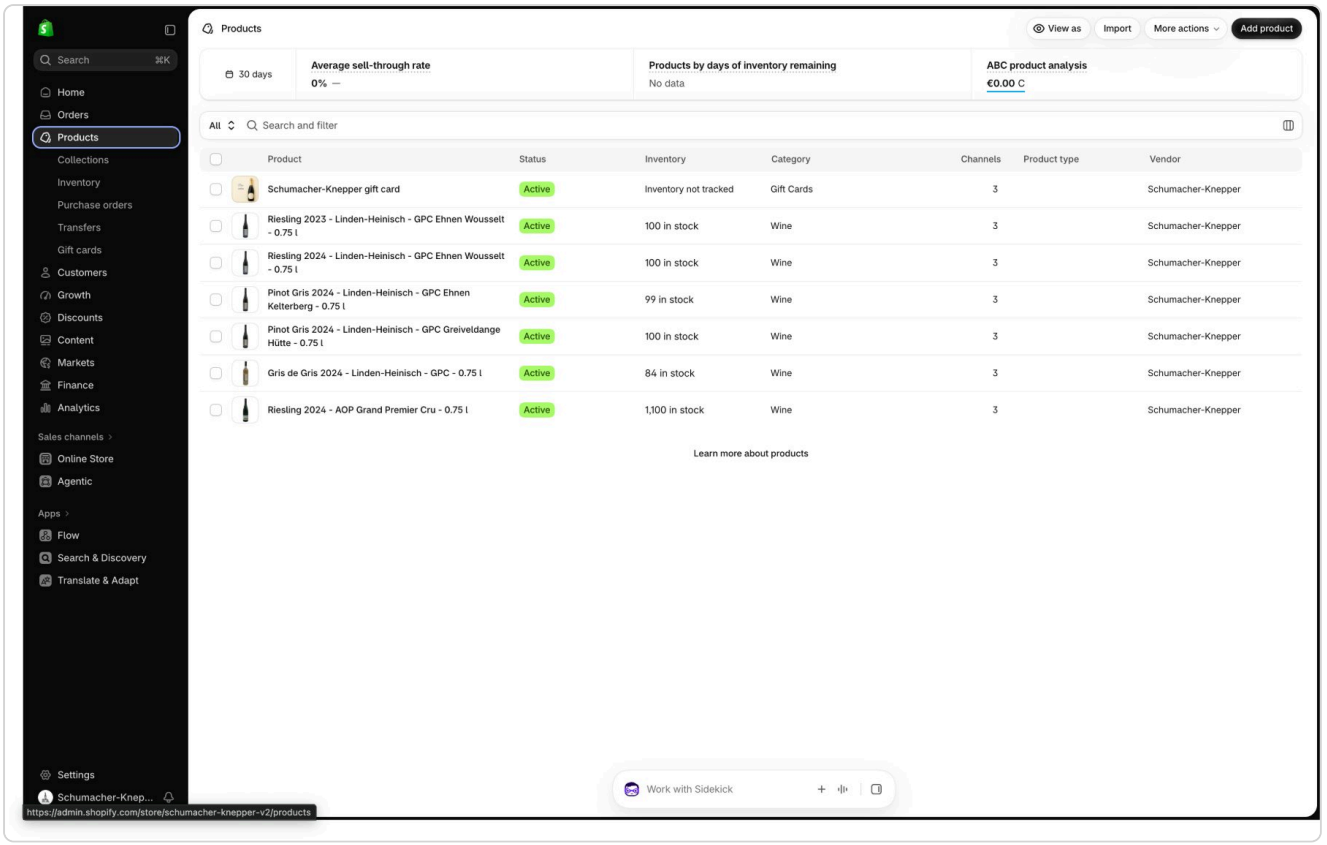

STEP 21 Select the new collection. Give the collection the same title, then add the description and the image. Save.

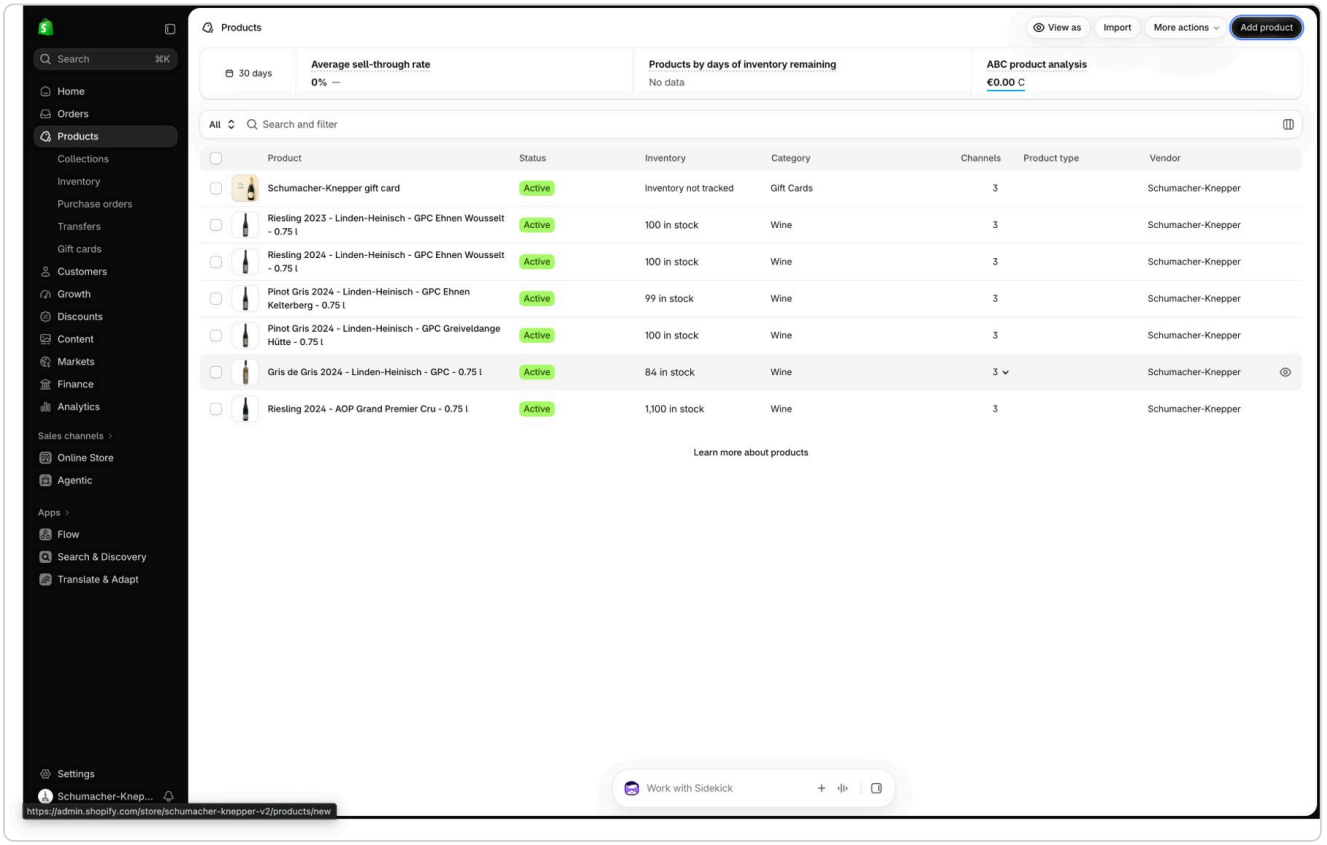

Add a product

STEP 22 Go to **Products**.

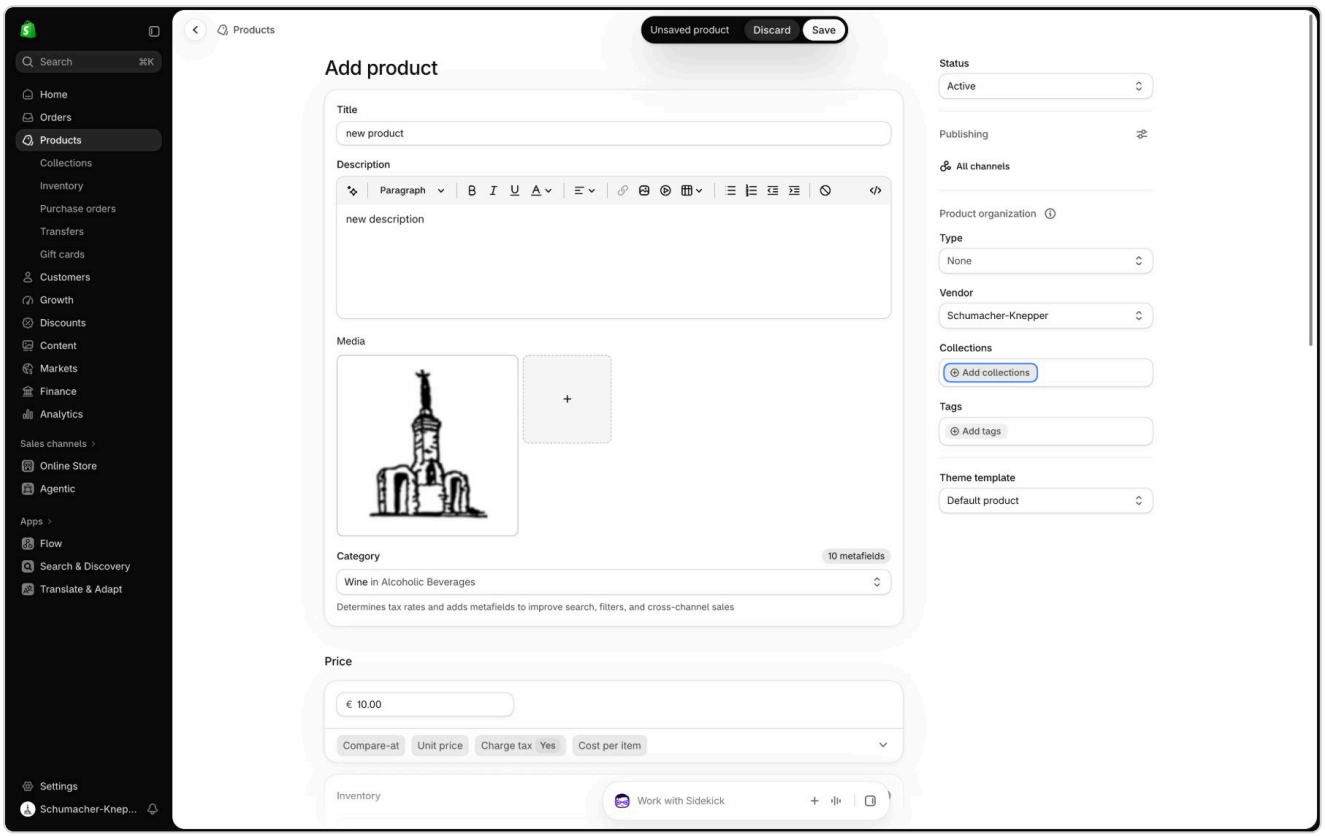

STEP 23 Click on **Add product**.

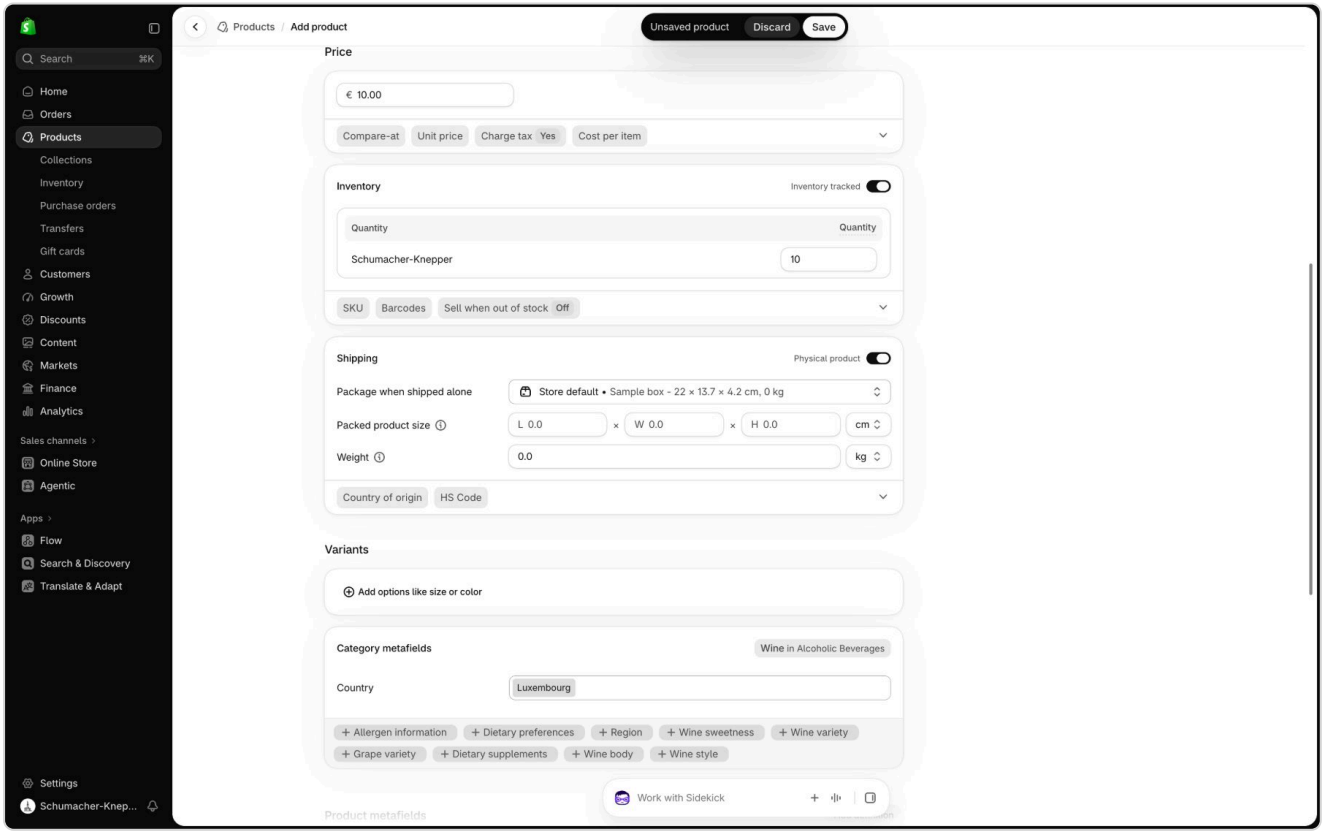

STEP 24 Fill in all the fields except **Type** and **Tags**.

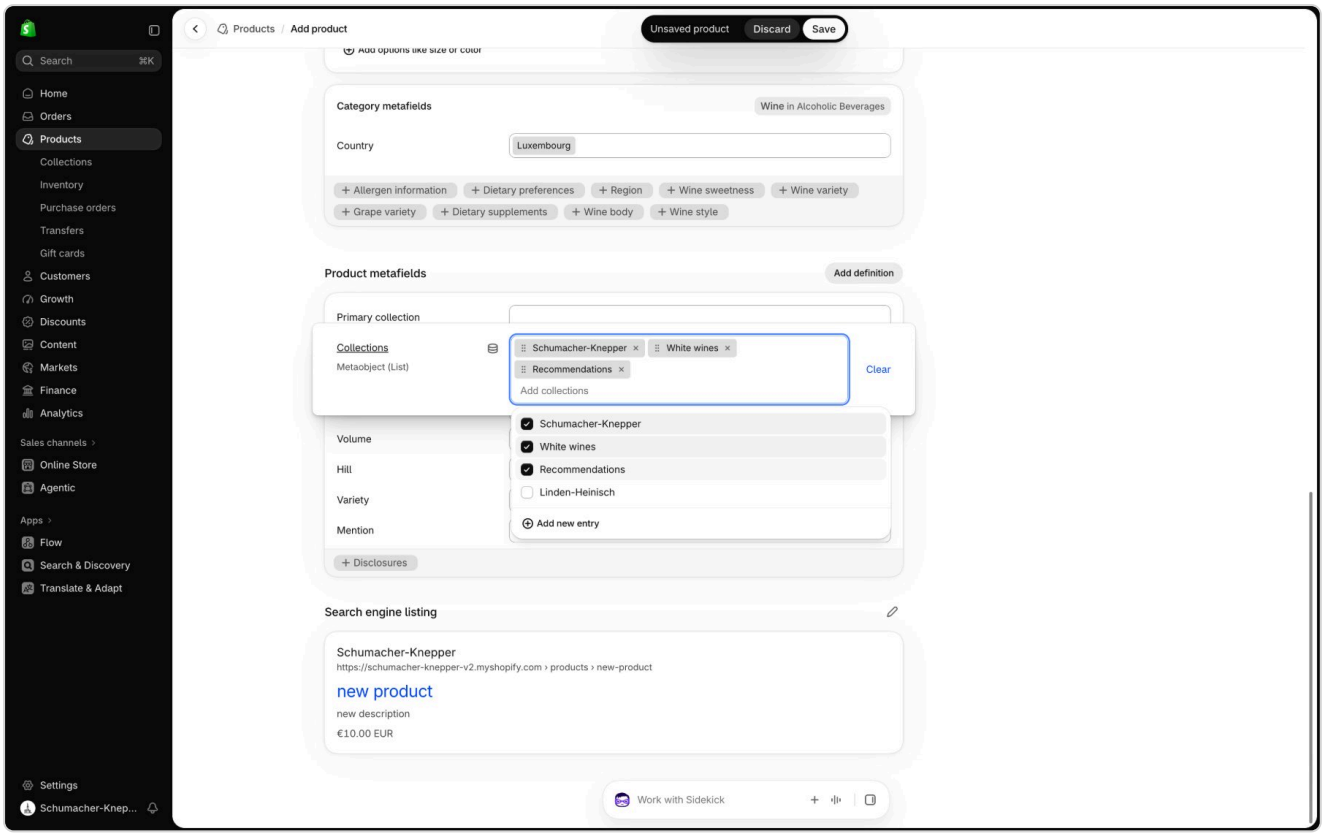

> **Warning:** Never click on **Add collections** in this part of the form. Collections are assigned further down.

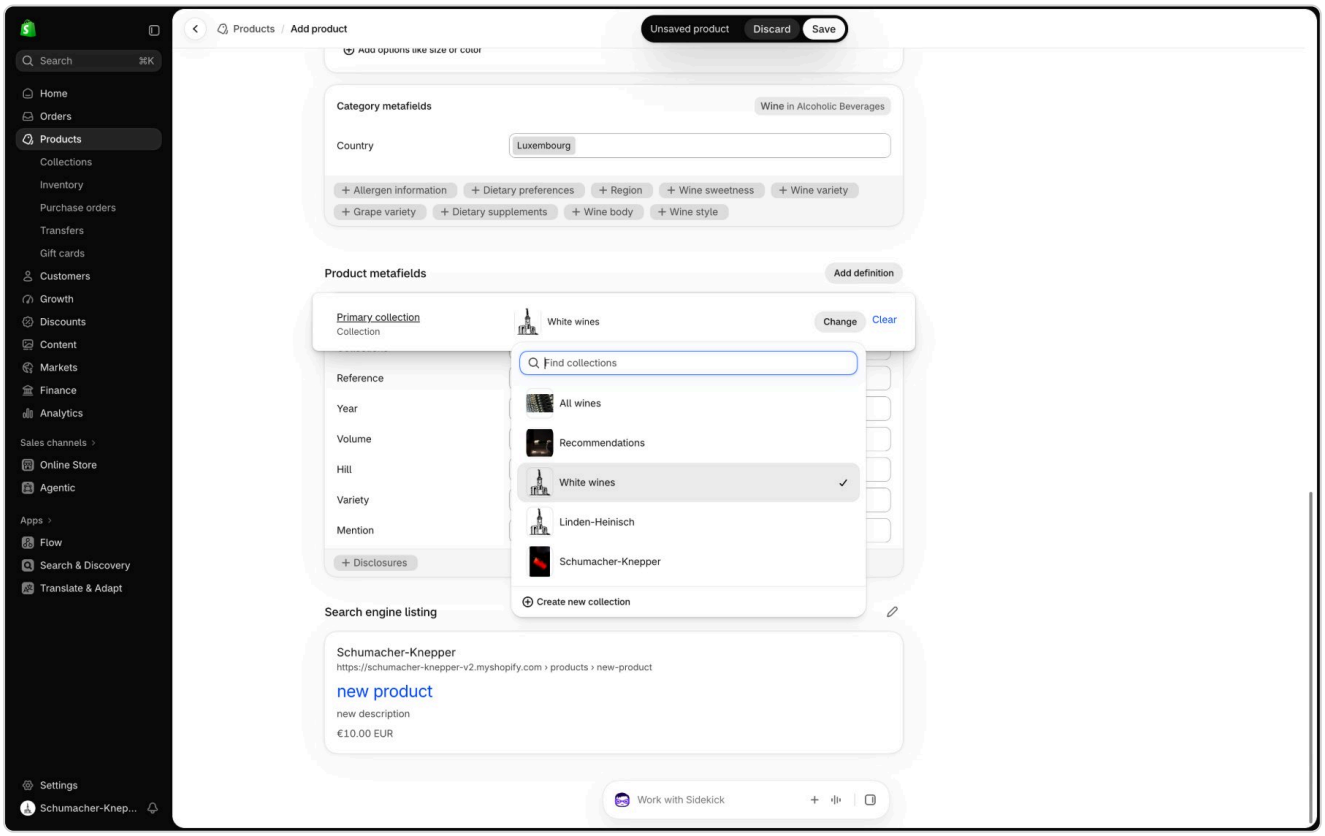

STEP 25 Continue filling in the fields.

STEP 26 Add or change the product's collections here, and only here.

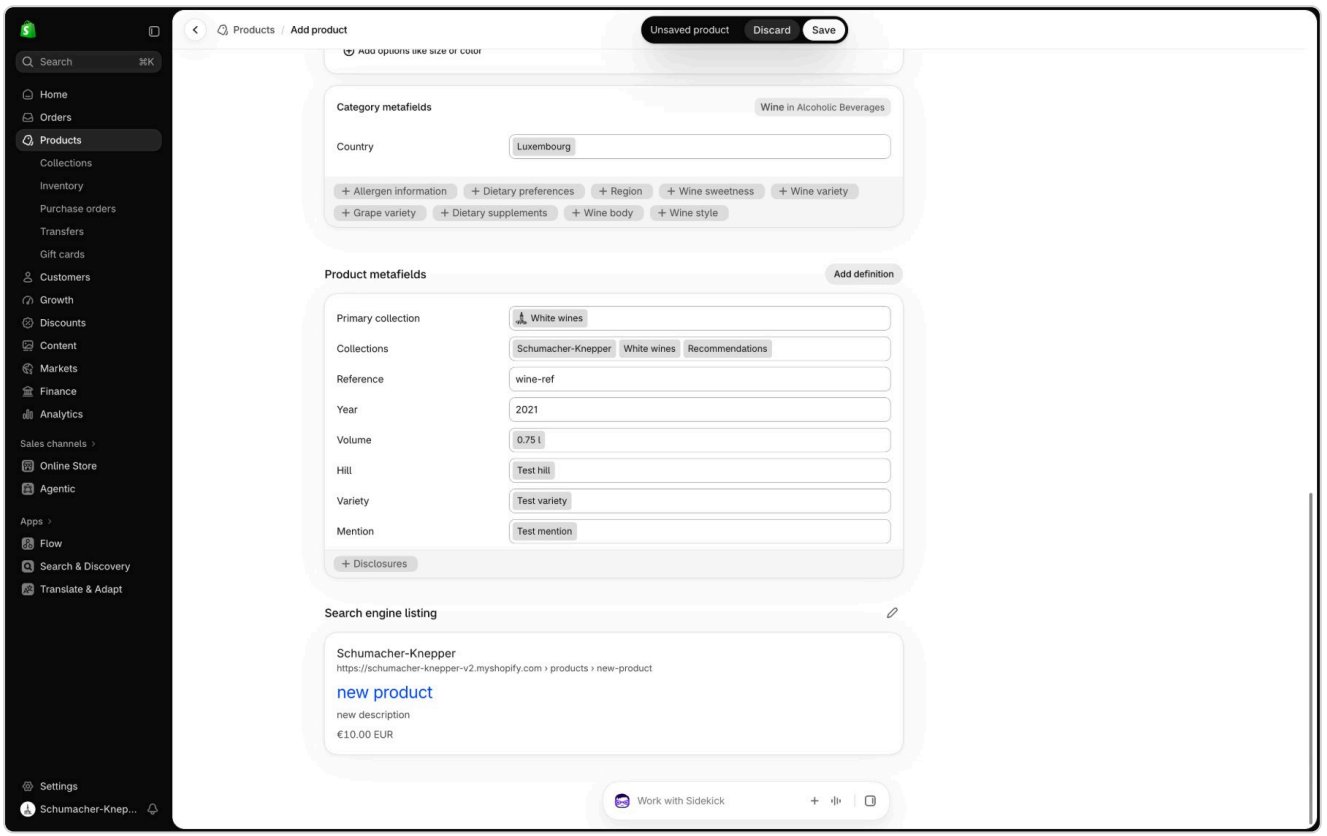

STEP 27 After adding the collections, choose the primary collection.

STEP 28 The primary collection is shown in the product page's breadcrumb.

All wines › White wines › Riesling 2023 - Linden-Heinisch - GPC Ehnen Wousselt - 0.75 l

STEP 29 Fill in the remaining fields and save.

3. Translations

STEP 1 Click on **Translate & Adapt**.
